Price 1s. Net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns : the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 5TH JANUARY, 1924

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the first week of the year numbered 8,193 and corresponded to an annual rate of 22·2 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 5,227 and corresponded to an annual rate of 14·2 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 14·7, 13·5 and 13·7. Infant mortality was 71 per 1,000 births, against 81, 82 and 117 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,992 births, corresponding to a rate of 22·9 per 1,000, and 1,310 deaths of civilians, corresponding to a rate of 15·1, as against 16·4, 14·0 and 13·9 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 14·9 per 1,000. The infant mortality was 65 as against 70, 62 and 94 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 182 in the total deaths last week, and the deaths from influenza rose from 93 to 98. In London the number of deaths from all causes rose from 1,209 to 1,310; while the deaths from diphtheria, which had been 13, 12 and 14 in the preceding three weeks, rose to 16 last week, and those from measles, which had been 32, 27 and 38 in the preceding three weeks, rose to 60 last week. The deaths from influenza, which had been 27, 24 and 21 in the three preceding weeks rose to 25 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE. DECEMBER.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
SUNDAY .. 30	Variably sN and sP till 3h.; wP till 9h.; mP till 14h.; then variably wP and wN.	0.0	7.8	Overcast with rain or damping through- out. Slight fog between 9h. and 12h.
MONDAY .. 31	wP till 9h.; then mP	0.1	7.8	Overcast. Damping till 2h. and from 13h. till 19h. Rain from 23h.
JANUARY. TUESDAY .. 1	mP	0.0	7.9	Overcast. Slight rain or damping till 12h.; and occasional damping between 15h. and 21h.
WEDNESDAY 2	mP till 8h.; sP till 13h.; then mP.	0.0	7.9	Overcast till 22h., becoming nearly cloudless by 23h. Damping about 3h., and from 16h. till 20h. Slight mist and dew at night.
THURSDAY 3	mP till 8h.; then sP.	1.2	7.9	Nearly cloudless till 4h.; nearly over- cast till 12h.; then partially cloudy, be- coming cloudless by 17h. Mist from 15h.
FRIDAY .. 4	mP	0.0	7.9	Cloudless till 7h.; overcast till 21h., clearing to cloudless by 22h. Occasional slight rain between 9h. and 12h. Mist in morning. Hoar frost at night.
SATURDAY 5	mP	4.9	7.9	Partially cloudy. Hoar frost in morning and at night.
No. of Col.	26	Sum 6.2	Sum 55.1	28

The results apply to the civil day, or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observa-
tions made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermo-
meter, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are:—P. positive; N. negative; w. weak; m. moderate;
s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument,
show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 30.12 in. at the beginning of the
week to 29.75 in. by 14h. on December 30th; increased to 30.19 in. by 11h. on December
31st; decreased to 29.76 in. by 21h. on January 2nd; increased to 30.16 in. by 10h. on
5th.; decreased and was 30.11 in. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns : the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Poli-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 12TH JANUARY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the second week of the year numbered 7,352 and corresponded to an annual rate of 20·0 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 5,618 and corresponded to an annual rate of 15·3 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 13·5, 13·7 and 14·2. Infant mortality was 90 per 1,000 births, against 82, 117 and 71 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,667 births, corresponding to a rate of 19·1 per 1,000, and 1,457 deaths of civilians, corresponding to a rate of 16·8, as against 14·0, 13·9 and 15·1 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 15·0 per 1,000. The infant mortality was 92 as against 62, 94 and 65 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 392 in the total deaths last week, but the deaths from influenza fell from 98 to 93. In London the number of deaths from all causes rose from 1,309 to 1,457; while the deaths from diphtheria, which had been 12, 14 and 16 in the preceding three weeks, fell to 14 last week, and those from measles, which had been 27, 38 and 60 in the preceding three weeks, fell to 49 last week. The deaths from influenza, which had been 24, 21 and 25 in the three preceding weeks rose to 28 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
JANUARY.					
SUNDAY ..	6 wP till 9h.; then mP	6.4	8.0	Overcast generally till 6½h., then cloud- less. Hoar frost in morning and at night.	<p>The results apply to the civil day, or from midnight to midnight. The height of the stem of the barometer is 152 feet above the mean level of the sea : no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables. The average temperature of the air is that derived from a discussion of the observa- tions made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average. The values given in column 17 are not corrected for the index error of the thermo- meter, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are :—P. positive ; N. negative ; w. weak ; m. moderate ; s. strong ; and v. variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.</p> <p>The reading of the barometer decreased from 30.11 in. at the beginning of the week to 28.85 in. by 8h. on 9th ; increased generally to 29.67 in. by 13h. on 11th ; decreased to 28.58 in. by 5h. on 12th ; increased to 29.75 in. by 18h. on 12th ; decreased and was 29.68 in. by midnight on the same day.</p>
MONDAY ..	7 wP till 13h.; then mP	5.0	8.0	Cloudless till 18h., then nearly overcast. Hoar frost in morning	
TUESDAY ..	8 wP till 15½h.; sN till 16h.; wP till 22h.; then wN.	0.0	8.0	Overcast throughout. Occasional damp- ing between 7½h. and 20½h., then snow. Brisk wind from 18h.	
WEDNESDAY	9 Variably wN and wP till 7h.; then mP.	0.0	8.0	Overcast throughout. Snow till 12h. Brisk wind till 9h.	
THURSDAY	10 mP till 18h.; then variably sN and mP.	0.0	8.1	Nearly overcast throughout. Snow 4½h. till 5h., then damping till 7h. Rain generally from 16h. Partial solar halo 8½h., and between 9h. and 11h.	
FRIDAY ..	11 Variably sN and sP till 1h.; wP till 8h.; mP till 17h.; sP till 19h.; then wP.	4.4	8.1	Overcast till 5h.; partially cloudy till 13h., then overcast. Slight rain from 23½h. Brisk wind from 22h. Dew at night.	
SATURDAY	12 wP	0.0	8.1	Overcast till 13½h., then partially cloudy. Brisk wind till 16h. Occasional damping between 6h. and 9h.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 19TH JANUARY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the third week of the year numbered 7,432 and corresponded to an annual rate of 20·2 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 5,424 and corresponded to an annual rate of 14·8 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 13·7, 14·2 and 15·3. Infant mortality was 87 per 1,000 births, against 117, 71 and 90 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,738 births, corresponding to a rate of 20·0 per 1,000, and 1,363 deaths of civilians, corresponding to a rate of 15·7, as against 13·9, 15·1 and 16·8 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 15·4 per 1,000. The infant mortality was 77 as against 94, 65 and 92 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 196 in the total deaths last week, but the deaths from influenza rose from 93 to 153. In London the number of deaths from all causes fell from 1,459 to 1,363; while the deaths from diphtheria, which had been 14, 16 and 14 in the preceding three weeks, were 13 last week, and those from measles, which had been 38, 60 and 49 in the preceding three weeks, further fell to 42 last week. The deaths from influenza, which had been 21, 25 and 28 in the three preceding weeks rose to 49 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE. JANUARY.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
SUNDAY .. 13	wP	1·6	8·2	Cloudless till 4h., then overcast generally. Shower 7h. Slight damping 20h. and 21h. Brisk wind 4h. till 8h.
MONDAY .. 14	wP till 14h.; then mP.	0·0	8·2	Overcast clearing to partially cloudy by 19h. Occasional damping 5h. till 12h. Partial lunar halo 23h.
TUESDAY .. 15	wP till 15h., then mP.	5·2	8·2	Partially cloudy. Dew in morning.
WEDNESDAY 16	wP till 7h., then mP	1·7	8·3	Partially cloudy with cloudless intervals. Dew in morning and at night.
THURSDAY 17	wP till 13h.; vari- ably wN and wP till 14h.; then wP.	0·0	8·3	Overcast throughout. Rain 3h. till 4h. Misty rain 8h till 9h. and from 12h.
FRIDAY .. 18	wP till 4h.; mN till 5h.; wP till 11h.; mN till 12h.; wN till 13h.; then mP.	0·0	8·4	Overcast. Rain 4h till 9h., and from 10h. till 14h.
SATURDAY 19	wP till 7h.; variably mN and mP till 9h.; mP till 15h.; variably sP and sN till 18h.; then wP.	4·0	8·4	Overcast with slight break from 12h. till 14h. Frequent rain till 9h., from 14h. till 16h., and from 23h. Hail and lightning at 15h. Brisk wind 12h. till 23h.
No. of Col.	26	Sum 12·5	Sum 58·0	27 28

The results apply to the civil day, or from midnight to midnight.
The height of the stem of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the aid of the corrected mean daily values of the dry bulb thermometer, the corrected mean daily values of the readings of the maximum and minimum thermometers, forming the mean daily value of the saturation vapour pressure in column 8. The mean daily dew point temperature and degree of humidity are deduced from the tables of the day and wet bulb thermometers by Glaisher's Hygrometrical Tables.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1905.
In reading columns 9 and 24 it will be borne in mind that + indicates "*higher*," and - "*lower*," than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29·69 in. at the beginning of the week to 29·43 in. by 0h. on 14th; increased to 29·66 in. by 21h. on 14th; decreased to 29·96 in. by 13h. on 16th; increased to 29·69 in. by 20h. on 17th; decreased to 29·31 in. by 8h. on 19th; increased and was 29·41 in. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 26TH JANUARY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the fourth week of the year numbered 7,116 and corresponded to an annual rate of 19·3 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 5,275 and corresponded to an annual rate of 14·3 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 14·2, 15·3 and 14·8. Infant mortality was 99 per 1,000 births, against 71, 90 and 87 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,682 births, corresponding to a rate of 19·3 per 1,000, and 1,300 deaths of civilians, corresponding to a rate of 14·9, as against 15·1, 16·8 and 15·7 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 15·6 per 1,000. The infant mortality was 95 as against 65, 92 and 77 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 149 in the total deaths last week, but the deaths from influenza rose from 153 to 236. In London the number of deaths from all causes fell from 1,363 to 1,300; while the deaths from diphtheria, which had been 16, 14 and 13 in the preceding three weeks, rose to 16 last week, and those from measles, which had been 60, 49 and 42 in the preceding three weeks, rose to 50 last week. The deaths from influenza, which had been 25, 28 and 49 in the three preceding weeks further rose to 74 last week.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

SATURDAY 26	mP.	3'4	8'7	Cloudless till 3h., overcast till 11h., then partially cloudy. Hoar frost and slight fog in morning.
No. of Col.	26	Sum 11'7	Sum 60'1	
		27	28	

The results apply to the civil day, or from midnight to midnight. The height of the stem of the barometer is 132 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's hygrometrical tables. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1906. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average. The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong and variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29'41 in. at the beginning of the week to 29'88 in. by 1h. on 21st; decreased to 29'72 in. by 16h. on 22nd; increased to 30'02 in. by 22h. on 23rd; decreased to 29'93 in. by 21h. on 24th; increased to 30'46 in. by 10h. on 26th; decreased and was 30'34 in. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns : the heading "Diphtheria" includes Membranous Group, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 2ND FEBRUARY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the fifth week of the year numbered 7,761 and corresponded to an annual rate of 21·1 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 5,793 and corresponded to an annual rate of 15·8 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 15·3, 14·8 and 14·3. Infant mortality was 97 per 1,000 births, against 90, 87 and 99 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,832 births, corresponding to a rate of 21·0 per 1,000, and 1,579 deaths of civilians, corresponding to a rate of 18·2, as against 16·8, 15·7 and 14·9 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 16·4 per 1,000. The infant mortality was 86 as against 92, 77 and 95 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 519 in the total deaths last week, and the deaths from influenza rose from 236 to 367. In London the number of deaths from all causes rose from 1,299 to 1,579; while the deaths from diphtheria, which had been 14, 13 and 16 in the preceding three weeks, rose to 17 last week, and those from measles, which had been 49, 42 and 50 in the preceding three weeks, fell to 48 last week. The deaths from influenza, which had increased from 25 to 74 in the four preceding weeks further rose to 122 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 9TH FEBRUARY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the sixth week of the year numbered 7,419 and corresponded to an annual rate of 20·1 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 6,234 and corresponded to an annual rate of 17·0 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 14·8, 14·3 and 15·8. Infant mortality was 110 per 1,000 births, against 87, 99 and 97 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,750 births, corresponding to a rate of 20·1 per 1,000, and 1,741 deaths of civilians, corresponding to a rate of 20·0, as against 15·7, 14·9 and 18·2 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 17·2 per 1,000. The infant mortality was 109 as against 77, 95 and 86 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 441 in the total deaths last week, and the deaths from influenza rose from 367 to 501. In London the number of deaths from all causes rose from 1,579 to 1,741; while the deaths from diphtheria, which had been 13, 16 and 17 in the preceding three weeks, fell to 12 last week, and those from measles, which had been 42, 50 and 48 in the preceding three weeks, fell to 39 last week. The deaths from influenza, which had increased from 25 to 122 in the five preceding weeks further rose to 154 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and East are corrected by the exclusion of deaths of persons admitted into public institutions from about the respective areas.

* Including deaths from croup in Bombay, Paris, Antwerp, Amsterdam, Copenhagen, the German Cities, Vienna, Prague and Suburbs, Budapest, Warsaw, Rio de Janeiro, and Montevideo.

† The deaths in this column relate to all ages for Bombay, Madras, and Christiania, and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ The estimated population and deaths refer to the civilian population only.

§ Including 33 deaths from Asiatic Cholera in Calcutta, 1 in Bombay and 1 and 0 in Madras, and from Plague 1 and 0 in Alexandria.

|| The registration of births in Bombay is incomplete.

¶ The figures given as for the week ended Dec. 29th, published in this table last week, actually related to the week ended Jan. 5th.

Table 4.

SATURDAY	9 wP till 7h.; vari- ably wN and wP till 16h.; then mP.	0'0	9'5	Nearly overcast till 19h., then partially cloudy. Occasional slight rain 8h. till 12h., and frequent rain between 12h. and and 16h. Brisk wind 7h. till 15h.
		Sum 2'9	Sum 65'4	
No. of Col.	..	27	28	

The results apply to the civil day, or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased generally from 30.24 in. at the beginning of the week to 29.74 in. by 3h. on 6th; increased to 29.88 in. by 0h. on 7th; decreased to 28.85 in. by 13h. on 9th; increased and was 28.98 in. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 16TH FEBRUARY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the seventh week of the year numbered 6,608 and corresponded to an annual rate of 17·9 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 6,436 and corresponded to an annual rate of 17·5 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 14·3, 15·8 and 17·0. Infant mortality was 132 per 1,000 births, against 99, 97 and 110 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,474 births, corresponding to a rate of 16·9 per 1,000, and 1,699 deaths of civilians, corresponding to a rate of 19·5, as against 14·9, 18·2 and 20·0 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 18·2 per 1,000. The infant mortality was 145 as against 95, 86 and 109 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 203 in the total deaths last week, and the deaths from influenza rose from 501 to 615. In London the number of deaths from all causes declined from 1,741 to 1,699; while the deaths from diphtheria, which had been 16, 17 and 12 in the preceding three weeks, were 11 last week, and those from measles, which had been 50, 48 and 39 in the preceding three weeks, rose to 58 last week. The deaths from influenza, which had increased from 25 to 154 in the six preceding weeks further rose to 178 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE. FEBRUARY.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
10 .. UNDAY	mP till 3h.; wP till 5h.; mP till 8h.; sP till 10h.; mP till 13h.; then wP.	0.0	9.6	Nearly cloudless till 1h., then overcast. Mist till 15h.	
11 .. ONDAY	wP till 6h.; mP till 11h.; then wP.	0.0	9.6	Overcast throughout.	
12 .. UESDAY	Variably wP and wN till 10h.; then wP.	0.0	9.7	Overcast throughout. Slight misty rain 13h. till 20h.	
13 .. EDNESDAY	wN till 8h.; wP till 13h. No register after 13h.	0.0	9.8	Overcast. Damping 4h. till 4½h. Occa- sional slight snow between 15h. and 17h. Brisk wind from 1h.	
14 .. HURSDAY	No register	0.9	9.8	Overcast till 20h., clearing rapidly to cloudless. Brisk wind till 12h. Hoar frost at night.	
15 .. RIDAY	No register	0.4	9.9	Nearly cloudless, becoming overcast by 11½h. Hoar frost in morning. Snow be- tween 12h. and 17½h. Slight fog at night.	
16 .. ATURDAY	No register till 11h.; wP till 19h.; mP till 23h.; then wP.	6.4	10.0	Overcast till 7h.; cloudless till 9h., then partially cloudy.	
.. o. of Col.	26	Sum 7.7	Sum 68.4		
		27	28		

The results apply to the civil day, or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. p.m., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 60 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 28.99 in. at the beginning of the week to 28.81 in. by 15h. on 10th; increased to 29.35 in. by 7h. on 12th; decreased to 29.23 in. by 22h. on 12th; increased to 30.17 in. by 4h. on 15th; decreased to 30.08 in. by 20h. on 15th; increased and was 30.44 in. by midnight on the 16th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 23RD FEBRUARY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the eighth week of the year numbered 7,463 and corresponded to an annual rate of 20·3 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 6,875 and corresponded to an annual rate of 18·7 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 15·8, 17·0 and 17·5. Infant mortality was 124 per 1,000 births, against 97, 110 and 132 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,745 births, corresponding to a rate of 20·0 per 1,000, and 1,845 deaths of civilians, corresponding to a rate of 21·2, as against 18·2, 20·0 and 19·5 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 19·7 per 1,000. The infant mortality was 123 as against 86, 109 and 145 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 440 in the total deaths last week, and the deaths from influenza rose from 615 to 626. In London the number of deaths from all causes rose from 1,699 to 1,845; while the deaths from diphtheria, which had been 17, 12 and 11 in the preceding three weeks, rose to 16 last week, and those from measles, which had been 48, 39 and 58 in the preceding three weeks, rose to 71 last week. The deaths from influenza, which had increased from 25 to 178 in the seven preceding weeks, fell to 148 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
FEBRUARY.					
SUNDAY .. 17	wP to 11h.; thence register lost.	1·2	10·0	Overcast till 3h.; cloudless till 8h., then overcast generally. Slight snow till frost. Mist from 19h. Lunar halo 21h. Hoar frost.	<p>The results apply to the civil day, or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average. The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong, and v, variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.</p>
MONDAY .. 18	No register till 11h.; wP till 16h.; mP till 21h. No register from 21h.	0·0	10·1	Nearly overcast. Lunar halo 14h. to 2h. Hoar frost in morning. Slight rain between 11h. and 1ch.	
TUESDAY .. 19	No register	0·2	10·1	Overcast. Occasional snow 6h. till 5h., and from 11½h. till 13h. Occasional slight showers between 15h. and 21h.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

* WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 1st MARCH, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the ninth week of the year numbered 6,877 and corresponded to an annual rate of 18·7 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 6,933 and corresponded to an annual rate of 18·9 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 17·0, 17·5 and 18·7. Infant mortality was 123 per 1,000 births, against 110, 132 and 124 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,680 births, corresponding to a rate of 19·3 per 1,000, and 1,740 deaths of civilians, corresponding to a rate of 20·0, as against 20·0, 19·5, and 21·2 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 20·2 per 1,000. The infant mortality was 105 as against 109, 145 and 123 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 57 in the total deaths last week, and the deaths from influenza rose from 627 to 636. In London the number of deaths from all causes fell from 1,845 to 1,740; while the deaths from diphtheria, which had been 12, 11 and 16 in the preceding three weeks, fell to 11 last week, and those from measles, which had been 39, 58 and 71 in the preceding three weeks, further rose to 92 last week. The deaths from influenza, which had been 154, 178 and 148 in the three preceding weeks, fell to 139 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

THURSDAY	28 mP to 5h.; then sP.	4·7	10·7	Overcast till 8h. very cloudily generally till 17½h., clearing to cloudless by 18h. Snow 2h., at 12h., at 15½h. and 17h.
FRIDAY ..	29 sP, till 1h.; wP till 16h.; sP, till 21h.; then mP.	0·3	10·8	Variably cloudy till 7h. becoming over- cast generally by 7½h. Clearing from 23h. Occasional rain 13½h. till 15h. Heavy shower 16h. Brisk wind from 8h.
MARCH. SATURDAY	1 mP till 4h.; wP till 7h.; mP till 9h.; sP till 14h.; mP till 18h. then sP.	7·0	10·8	Overcast till 5h. clearing to few clouds by 6h. Overcast generally from 15h. Brisk wind till 15h.
No. of Col.	..	Sum 15·2	Sum 74·5	

The results apply to the civil day, or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 66 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1910.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The records of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong and extreme.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 30·20 in. at the beginning of the week to 29·70 in. by 4h. on 25th; increased generally to 30·15 in. by 10h. on 27th; decreased to 29·80 in. by 1h. on 28th; increased to 29·91 in. by 21h. on 28th; decreased to 29·12 in. by 8h. on March 1st; increased and was 29·14 in. at midnight of the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns : the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 8TH MARCH, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the tenth week of the year numbered 7,785 and corresponded to an annual rate of 21·1 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 7,311 and corresponded to an annual rate of 19·9 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 17·5, 18·7 and 18·9. Infant mortality was 121 per 1,000 births, against 132, 124 and 123 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,924 births, corresponding to a rate of 22·1 per 1,000, and 1,677 deaths of civilians, corresponding to a rate of 19·3, as against 19·5, 21·2, and 20·0 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 20·0 per 1,000. The infant mortality was 99 as against 145, 123 and 105 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 378 in the total deaths last week, and the deaths from influenza rose from 636 to 730. In London the number of deaths from all causes fell from 1,740 to 1,677; while the deaths from diphtheria, which had been 11, 16 and 11 in the preceding three weeks, were again 11 last week, and those from measles, which had been 58, 71 and 92 in the preceding three weeks, declined to 79 last week. The deaths from influenza, which had been 178, 148 and 139 in the three preceding weeks, further fell to 115 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
MARCH.				
SUNDAY ..	2 mP till 2h.; wP till 15h.; and mP till 17h.; mP till 17h.; then wP till 18h.; then mP.	3.8	10.9	Nearly overcast generally clearing to nearly cloudless by 13h. Snow 4h., 6h. and b-tween 13h. and 18h. Brisk wind 9h. till 14h.
MONDAY ..	3 Variably sN and sP till 5h.; sP till 8h.; sP till 10h.; mP till 18h.; N till 24h.; then sP.	5.3	11.0	Nearly overcast throughout. Snow till 8h. Rain 13h. till 19h.
TUESDAY ..	4 wP till 6h.; mP till 10h.; then sP.	7.1	11.1	Nearly overcast till 8h.; then partially cloudy clearing to cloudless by 13h. Haze in morning. Mist from 21h.
WEDNESDAY	5 sP till 2h.; mP till 5h.; sP till 7h.; mP till 12h.; wP till 17h.; then mP.	9.6	11.1	Cloudless till 2h., then partially cloudy. Hoar frost in morning.
THURSDAY	6 Variably sP and sN till 4h.; mP till 8h.; sP till 12h.; mP till 20h.; then wP.	1.4	11.2	Overcast till 13h.; nearly cloudless till 15h., then overcast. Rain 1h. till 2h.
FRIDAY ..	7 wP.	4.9	11.2	Overcast till 11h.; partially cloudy till 15h.; then cloudless, becoming overcast by 22h.
SATURDAY	8 wP till 17h.; then mP.	7.6	11.3	Overcast, clearing to nearly cloudless by 9h. Mist in morning. Hoar frost in morning and at night.
No. of Col.	26	Sum 39.7	Sum 77.8	
	..	27	28	

The results apply to the civil day, or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1905. With the corrected mean readings of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the tables of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 66 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1905.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and V. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased generally from 28.14 in. at the beginning of the week to 28.66 in. by 3h. on 3d; increased generally to 30.34 in. by 11h. on 7th; decreased and was 29.14 in. by midnight on 8th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 15TH MARCH, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the eleventh week of the year numbered 7,613 and corresponded to an annual rate of 20·7 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 7,252 and corresponded to an annual rate of 19·7 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 18·7, 18·9 and 19·9. Infant mortality was 112 per 1,000 births, against 124, 123 and 121 in the preceding three weeks. In London (Administrative County including the City of London) there were 1,755 births, corresponding to a rate of 20·2 per 1,000, and 1,590 deaths of civilians, corresponding to a rate of 18·3, as against 21·2, 20·0, and 19·3 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 19·7 per 1,000. The infant mortality was 91 as against 123, 105 and 99 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 59 in the total deaths last week, and the deaths from influenza fell from 730 to 681. In London the number of deaths from all causes fell from 1,677 to 1,590; while the deaths from diphtheria, which had been 16, 11 and 11 in the preceding three weeks, were 10 last week, and those from measles, which had been 71, 92 and 79 in the preceding three weeks, rose to 98 last week. The deaths from influenza, which had been 148, 139 and 115 in the three preceding weeks, further fell to 89 last week.

		27.			

The results apply to the civil day, or from midnight to midnight.

The height of the column of the barometer is 152 feet above the mean level of the sea.

Observations are usually taken at 9h. A.M., noon, 3h. P.M. and 9h. P.M. The means

of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb

thermometer, are converted into mean daily values by the application of corrections

deduced from a discussion of the photographic records made during the 50 years ending

1903. With the corrected mean reading of the dry bulb thermometer is combined the

corrected mean of the readings of the maximum and minimum thermometers, forming

the mean daily value of the temperature of the air (column 8). The mean daily dew

point temperature and degree of humidity are deduced from the mean daily values

of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observa-

tions made at Greenwich during the 65 years ending 1905, and that of horizontal

movement of the air from a discussion of the anemometric records for the 50 years

ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and

- "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermo-

meter, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are: -P. positive; N. negative; w. weak; m. moderate;

s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument,

show the aggregate duration of bright sunshine on each day

The reading of the barometer decreased generally from 30.14 in. at the beginning of

the week to 30.00 in. by 5h. on 10th; increased to 30.23 in. by 10h. on 12th; decreased

generally and was 29.87 in. by midnight on 15th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poli-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 22ND MARCH, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the twelfth week of the year numbered 7,343 and corresponded to an annual rate of 19·9 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 6,966 and corresponded to an annual rate of 18·9 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 18·9, 19·9 and 19·7. Infant mortality was 115 per 1,000 births, against 123, 121 and 112 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,677 births, corresponding to a rate of 19·3 per 1,000, and 1,574 deaths of civilians, corresponding to a rate of 18·1, as against 20·0, 19·3, and 18·3 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 18·9 per 1,000. The infant mortality was 83 as against 105, 99 and 91 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 286 in the total deaths last week, and the deaths from influenza fell from 681 to 627. In London the number of deaths from all causes fell from 1,590 to 1,574; while the deaths from diphtheria, which had been 11, 11 and 10 in the preceding three weeks, rose to 15 last week, and those from measles, which had been 92, 79 and 98 in the preceding three weeks, further rose to 121 last week. The deaths from influenza, which had been 139, 115 and 89 in the three preceding weeks, further fell to 83 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

SATURDAY 22	wP till 14h.; then mP.	1·1	12·3	Overcast with partially cloudy period 15h. till 20h. Damping 6h. till 8h.
No. of Col.	28	Sum 27·1	Sum 84·3	
		27	28	

The results apply to the civil day, or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1893. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from official tables.

The dry and wet bulb thermometers by Glaisher's Hygrometric Tables.

The average temperature of the air is that derived during 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29·38 in. at the beginning of the week to 29·36 in. by 13h. on 16th; increased to 29·70 in. by 20h. on 17th; decreased to 29·31 in. by 8h. on 19th; increased to 29·89 in. by 1h. on 21st; decreased to 29·72 in. by 10h. on 22nd; increased and was 29·75 in. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 29TH MARCH, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the thirteenth week of the year numbered 7,181 and corresponded to an annual rate of 19·5 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 6,419 and corresponded to an annual rate of 17·5 per 1,000 of their aggregate civilian population, which is estimated at 19,170,699 in the year 1922. In the preceding three weeks the rates had been 19·9, 19·7 and 18·9. Infant mortality was 113 per 1,000 births, against 121, 112 and 115 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,597 births, corresponding to a rate of 18·3 per 1,000, and 1,390 deaths of civilians, corresponding to a rate of 16·0, as against 19·3, 18·3, and 18·1 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 17·9 per 1,000. The infant mortality was 95 as against 99, 91 and 83 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 547 in the total deaths last week, and the deaths from influenza fell from 627 to 557. In London the number of deaths from all causes fell from 1,574 to 1,390; while the deaths from diphtheria, which had been 11, 10 and 15 in the preceding three weeks, were 14 last week, and those from measles, which had been 79, 98 and 121 in the preceding three weeks, fell to 100 last week. The deaths from influenza, which had been 115, 89 and 83 in the three preceding weeks, further fell to 49 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from about the respective areas.

		27	28		

The results apply to the civil day, or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 60 years ending 1903. With the corrected mean reading of the dry bulb thermometer is compared the corrected mean of the readings of the maximum and minimum thermometer, forming the mean daily value of the temperature of the air (column 8), the mean daily values of point temperature and degree of humidity are deduced from the tables of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is then derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1866.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.43 in. at the beginning of the week to 29.03 in. by 0h. on 24th; increased to 29.17 in. by 21h. on 24th; decreased to 29.07 in. by 6h. on 25th; increased and was 29.86 in. by midnight on the 28th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES: (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 5TH APRIL, 1924

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the fourteenth week of the year numbered 7,350 and corresponded to an annual rate of 19·8 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 5,689 and corresponded to an annual rate of 15·4 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923, the estimates of population for the year 1923 being given for the first time in this return. In the preceding three weeks the rates had been 19·6, 18·9 and 17·4. Infant mortality was 97 per 1,000 births, against 112, 115 and 113 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,698 births, corresponding to a rate of 19·4 per 1,000, and 1,145 deaths of civilians, corresponding to a rate of 13·1, as against 18·2, 18·0, and 15·9 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 16·3 per 1,000. The infant mortality was 65 as against 91, 83 and 95 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 730 in the total deaths last week, and the deaths from influenza fell from 557 to 403. In London the number of deaths from all causes fell from 1,390 to 1,145; while the deaths from diphtheria, which had been 10, 15 and 14 in the preceding three weeks, fell to 11 last week, and those from measles, which had been 98, 121 and 100 in the preceding three weeks, fell to 62 last week. The deaths from influenza, which had been 89, 83 and 49 in the three preceding weeks, further fell to 45 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

No. of Col.	..	26	28		

The results apply to the civil day, or from midnight to midnight.

The height of the cistern of the barometer is 122 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the same Tables.

The dry and wet bulb thermometers by Gladstone's Hygrometrical Tables. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 68 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.86 in. at the beginning of the week to 30.09 in. by 9h. on March 31st; decreased generally to 29.92 in. by 16h. on April 3rd; increased generally to 30.07 in. by 8h. on April 5th; decreased and was 29.98 in. by midnight on the same day.

1924. No. 15.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 12TH APRIL, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the fifteenth week of the year numbered 7,205 and corresponded to an annual rate of 19·4 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 5,593 and corresponded to an annual rate of 15·1 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 18·9, 17·4 and 15·4. Infant mortality was 101 per 1,000 births, against 115, 113 and 98 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,641 births, corresponding to a rate of 18·7 per 1,000, and 1,214 deaths of civilians, corresponding to a rate of 13·9, as against 18·0, 15·9, and 13·1 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 15·2 per 1,000. The infant mortality was 84 as against 83, 95 and 65 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 96 in the total deaths last week, and the deaths from influenza fell from 403 to 316. In London the number of deaths from all causes rose from 1,145 to 1,214; while the deaths from diphtheria, which had been 15, 14 and 11 in the preceding three weeks, further fell to 6 last week, and those from measles, which had been 121, 100 and 62 in the preceding three weeks, rose to 66 last week. The deaths from influenza, which had been 83, 49 and 45 in the three preceding weeks, further fell to 28 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

No. of Col.	26	Sum 15.2	Sum 93.8	27 28

The results apply to the civil day, or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 60 years ending 1905. With due allowance for the mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1906.

- In reading columns 9 and 24 it will be borne in mind that + indicates "higher" and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.98 in. at the beginning of the week to 29.35 in. by 11h. on 8th; increased to 29.44 in. by 23h. on 8th; decreased to 29.28 in. by 15h. on 10th; increased to 29.64 in. by 18h. on 11th; decreased to 29.12 in. by 14h. on 12th; increased and was 29.31 in. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poli-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 19TH APRIL, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the sixteenth week of the year numbered 6,883 and corresponded to an annual rate of 18·6 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 5,270 and corresponded to an annual rate of 14·2 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 17·4, 15·4 and 15·1. Infant mortality was 101 per 1,000 births, against 113, 98 and 101 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,565 births, corresponding to a rate of 17·9 per 1,000, and 1,087 deaths of civilians, corresponding to a rate of 12·4, as against 15·9, 13·1, and 13·9 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 13·8 per 1,000. The infant mortality was 67 as against 95, 65 and 84 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 323 in the total deaths last week, and the deaths from influenza fell from 316 to 282. In London the number of deaths from all causes fell from 1,214 to 1,087; while the deaths from diphtheria, which had been 14, 11 and 6 in the preceding three weeks, rose to 15 last week, and those from measles, which had been 100, 62 and 66 in the preceding three weeks, fell to 57 last week. The deaths from influenza, which had been 49, 45 and 28 in the three preceding weeks, rose to 45 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from throughout the respective areas.

		27	28	

The results apply to the civil day, or from midnight to midnight.

The height of the cistern of the barometer is 122 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h., A.M., noon, 3h., P.M., and 9h., P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photograph of the day bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which can be determined.

The records of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.31 in. at the beginning of the week to 29.55 in. by 12h. on 13th; decreased to 29.25 in. by 13h. on 14th; increased generally to 30.35 in. by midnight of the 18th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 26TH APRIL, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the seventeenth week of the year numbered 7,005 and corresponded to an annual rate of 18·9 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 5,161 and corresponded to an annual rate of 14·0 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 15·4, 15·1 and 14·2. Infant mortality was 89 per 1,000 births, against 98, 101 and 101 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,710 births, corresponding to a rate of 19·5 per 1,000, and 1,140 deaths of civilians, corresponding to a rate of 13·0, as against 13·1, 13·9, and 12·4 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 13·1 per 1,000. The infant mortality was 67 as against 65, 84 and 67 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 109 in the total deaths last week, and the deaths from influenza fell from 282 to 218. In London the number of deaths from all causes increased from 1,087 to 1,140; while the deaths from diphtheria, which had been 11, 6 and 15 in the preceding three weeks, fell to 12 last week, and those from measles, which had been 62, 66 and 57 in the preceding three weeks, were again 57 last week. The deaths from influenza, which had been 45, 28 and 45 in the three preceding weeks, fell to 21 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE. APRIL.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
SUNDAY .. 20	mP till 2h.; wP till 6h.; mP till 8h.; sP till 10h.; mP till 12h.; then wP.	2·6	14·1	Overcast till 10h.; nearly cloudless till 13h.; nearly overcast till 18h., becoming nearly cloudless by 19h. Mist 8h. till 15h.
MONDAY .. 21	wP till 6h.; mP till 14h.; then wP.	11·3	14·2	Nearly cloudless, becoming nearly overcast by 11h.
TUESDAY .. 22	wP till 8h.; mP till 19h.; then wP.	1·1	14·2	Overcast generally. Slight damping about 17h.
WEDNESDAY 23	wP till 21h.; sP till 23h.; sN till 23h.; then wP.	0·0	14·3	Overcast throughout. Slight rain between 21h. and 21½h.
THURSDAY 24	wP till 8h.; mP till 19h.; wP till 21h.; wN till 23h.; then wP.	0·5	14·3	Overcast, with slight breaks between 17h. and 19h. Damping at 20½h., and from 22½h.
FRIDAY .. 25	wP till 8½h.; wN till 10h.; mP till 20½h.; then wP.	4·0	14·4	Nearly overcast till 15h., then partially cloudy. Damping till 0½h. Slight rain from 8½h. till 10½h. Brisk wind 10h. till 14h.
SATURDAY 26	wP till 9h.; variably sN & sP till 13h.; mP till 20h.; sN till 21h.; then wP.	1·7	14·5	Partially cloudy, becoming overcast by 7h. Slight rain 6½h. till 10½h.; from 11½h. till 13h. and from 20h. till 21h. Thunder, lightning and heavy rain between 12h. and 12½h.
No. of Col.	26	Sum 21·2	Sum 100·0	28
		27		

The times used are from midnight to midnight, or Greenwich Mean Time (Civil Reckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are used in the following order: at 9h. A.M., noon, 3h., P.M., and 9h. P.M. The means of the eye-readings are inserted into mean daily values by the application of corrections to the thermometer, and the dry bulb thermometer, and the wet bulb thermometer, are combined to give the corrected mean reading of the dry bulb thermometer during the 50 years ending 1905. With this corrected mean reading of the dry bulb thermometer, forming the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 55 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased generally from 30·35 in. at the beginning of the week to 29·25 in. by 17h. on 26th; increased and was 29·28 in. by midnight on the same day.

WEEKLY RETURN
OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES AND OTHER
GREAT TOWNS

AND OF

CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN AND RURAL
DISTRICTS AND PORT SANITARY DISTRICTS

IN

ENGLAND AND WALES

DURING THE WEEK ENDED

SATURDAY, 3RD MAY, 1924.

Issued by the Registrar General.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 3RD MAY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the eighteenth week of the year numbered 8,092 and corresponded to an annual rate of 21·8 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,575 and corresponded to an annual rate of 12·4 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 15·1, 14·2 and 14·0. Infant mortality was 66 per 1,000 births, against 101, 101 and 89 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,809 births, corresponding to a rate of 20·6 per 1,000, and 1,000 deaths of civilians, corresponding to a rate of 11·4, as against 13·9, 12·4, and 13·0 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 12·7 per 1,000. The infant mortality was 53 as against 84, 67 and 67 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 586 in the total deaths last week, and the deaths from influenza fell from 218 to 167. In London the number of deaths from all causes decreased from 1,140 to 1,000; while the deaths from diphtheria, which had been 6, 15 and 12 in the preceding three weeks, were 13 last week, and those from measles, which had been 66, 57 and 57 in the preceding three weeks, fell to 40 last week. The deaths from influenza, which had been 28, 45 and 21 in the three preceding weeks, rose to 27 last week.

BELFAST† ..	434,000*	252	105	14	-	1	-	2	-	-	-

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

MONDAY .. 28	wP till 6h.; variably mP & mN till 16 ⁴ h.; mP till 21h.; then wP.	3·4	14·6	Cloudless till 1h.; then nearly overcast with partially cloudy interval between 20 ⁴ h. and 22h. Rain 3 ⁴ h. till 7h.; between 13 ⁴ h. and 16h.; and at 19 ⁴ h. Brisk wind till 3h., and from 9h.
TUESDAY .. 29	wP till 24h.; wN till 3h.; mP till 6h.; sP till 12h.; mP till 18h.; variably sP & sN till 19h.; then mP.	2·6	14·6	Nearly overcast generally. Rain 2 ⁴ h. till 4h.; and 17h. till 23h. Brisk wind till 2h.
WEDNESDAY 30	wP till 6h.; mP till 9h.; variably sP & sN till 21h.; then mP.	0·8	14·7	Overcast. Rain generally from 8 ⁴ h. till 21h.
MAY. THURSDAY 1	mP. wP till 11h.; mP till 12 ⁴ h.; variably sP & sN till 16h.; then sP.	0·0	14·8	Overcast, clearing from 21h. to cloudless by 22h. Damping from 6h. till 8 ⁴ h.; then rain till 8 ⁴ h., and between 12 ⁴ h. and 14 ⁴ h. Gloom 13 ⁴ h.
FRIDAY .. 2	sP till 2h.; mP till 3h.; wP till 9h.; mP till 17 ⁴ h.; sP till 19h.; then mP. mP till 0 ⁴ h.; sP till 0 ⁴ h.; wP till 6h.; mP till 15 ⁴ h.; sP till 16 ⁴ h.; mP till 20h.; then vari- ably sP & sN.	6·2	14·8	Nearly overcast till 15h.; partially cloudy till 21 ⁴ h., then overcast. Occa- sional rain 7 ⁴ h. till 9h.
SATURDAY 3	mP till 0 ⁴ h.; sP till 0 ⁴ h.; wP till 6h.; mP till 15 ⁴ h.; sP till 16 ⁴ h.; mP till 20h.; then vari- ably sP & sN.	2·6	14·9	Overcast generally. Shower 0 ⁴ h. Rain from 20h. till 22h. Thunder 16h. till 16 ⁴ h.
		Sum 18·8	Sum 102·9	
No. of Col.	26	27	28	

The times used are from midnight to midnight, or Greenwich Mean Time (Civil Reckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1906.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

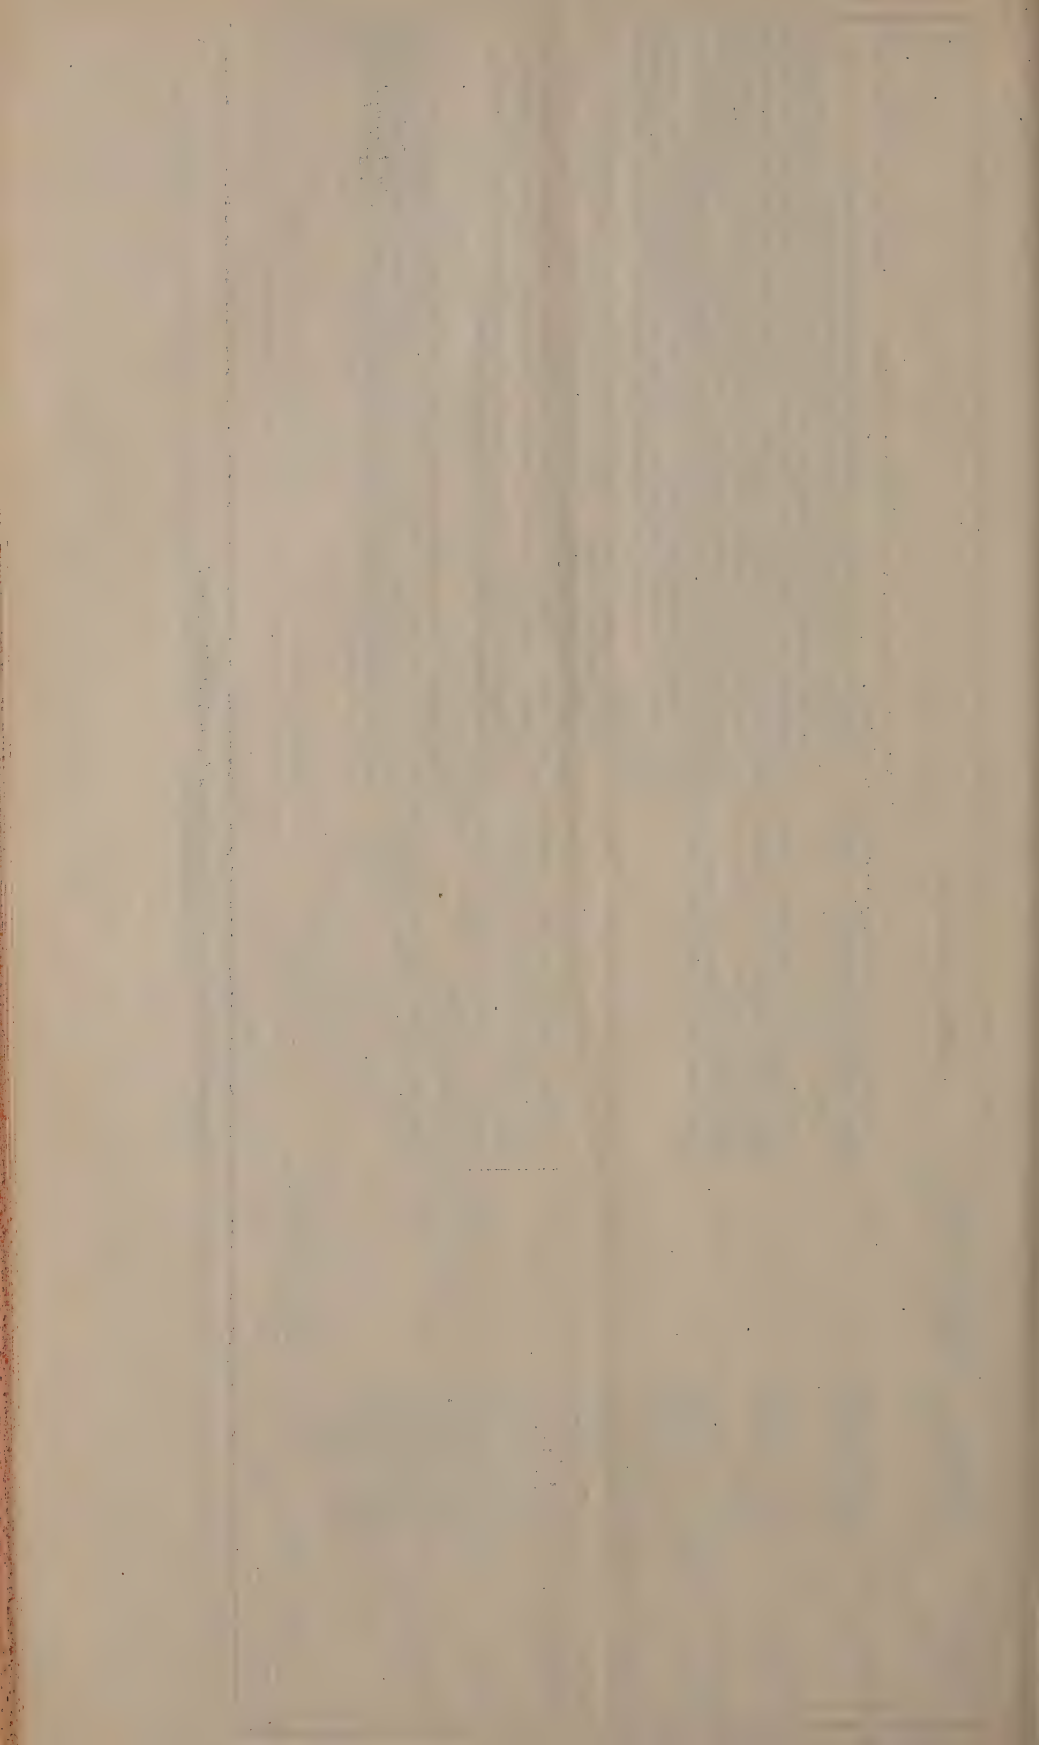

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29·28 in. at the beginning of the week to 29·49 in. by 7h. on 27th; decreased to 29·15 in. by 17h. on 27th; increased to 29·43 in. by 1h. on 28th; decreased to 29·29 in. by 9h. on 28th; increased to 29·42 in. by 10h. on 28th; decreased generally to 29·28 in. by 18h. on 30th; increased to 29·65 in. by 22h. on May 1st; decreased to 29·43 in. by 4h. on May 3rd; increased and was 29·65 in. by mid-
night on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Poliomyelitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 10TH MAY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the nineteenth week of the year numbered 7,912 and corresponded to an annual rate of 21·4 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,122 and corresponded to an annual rate of 11·2 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 14·2, 14·0 and 12·4. Infant mortality was 64 per 1,000 births, against 101, 89 and 66 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,857 births, corresponding to a rate of 21·2 per 1,000, and 850 deaths of civilians, corresponding to a rate of 9·7, as against 12·4, 13·0, and 11·4 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 11·6 per 1,000. The infant mortality was 40 as against 67, 67 and 53 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 453 in the total deaths last week, and the deaths from influenza fell from 167 to 95. In London the number of deaths from all causes decreased from 1,000 to 850; while the deaths from diphtheria, which had been 15, 12 and 13 in the preceding three weeks, fell to 7 last week, and those from measles, which had been 57, 57 and 40 in the preceding three weeks, further fell to 22 last week. The deaths from influenza, which had been 45, 21 and 27 in the three preceding weeks, fell to 11 last week.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

No. of Col.	..	26	Sum 44.7	Sum 105.9	

The times used are from midnight to midnight, or Greenwich Mean Time (Civil Reckoning).
The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

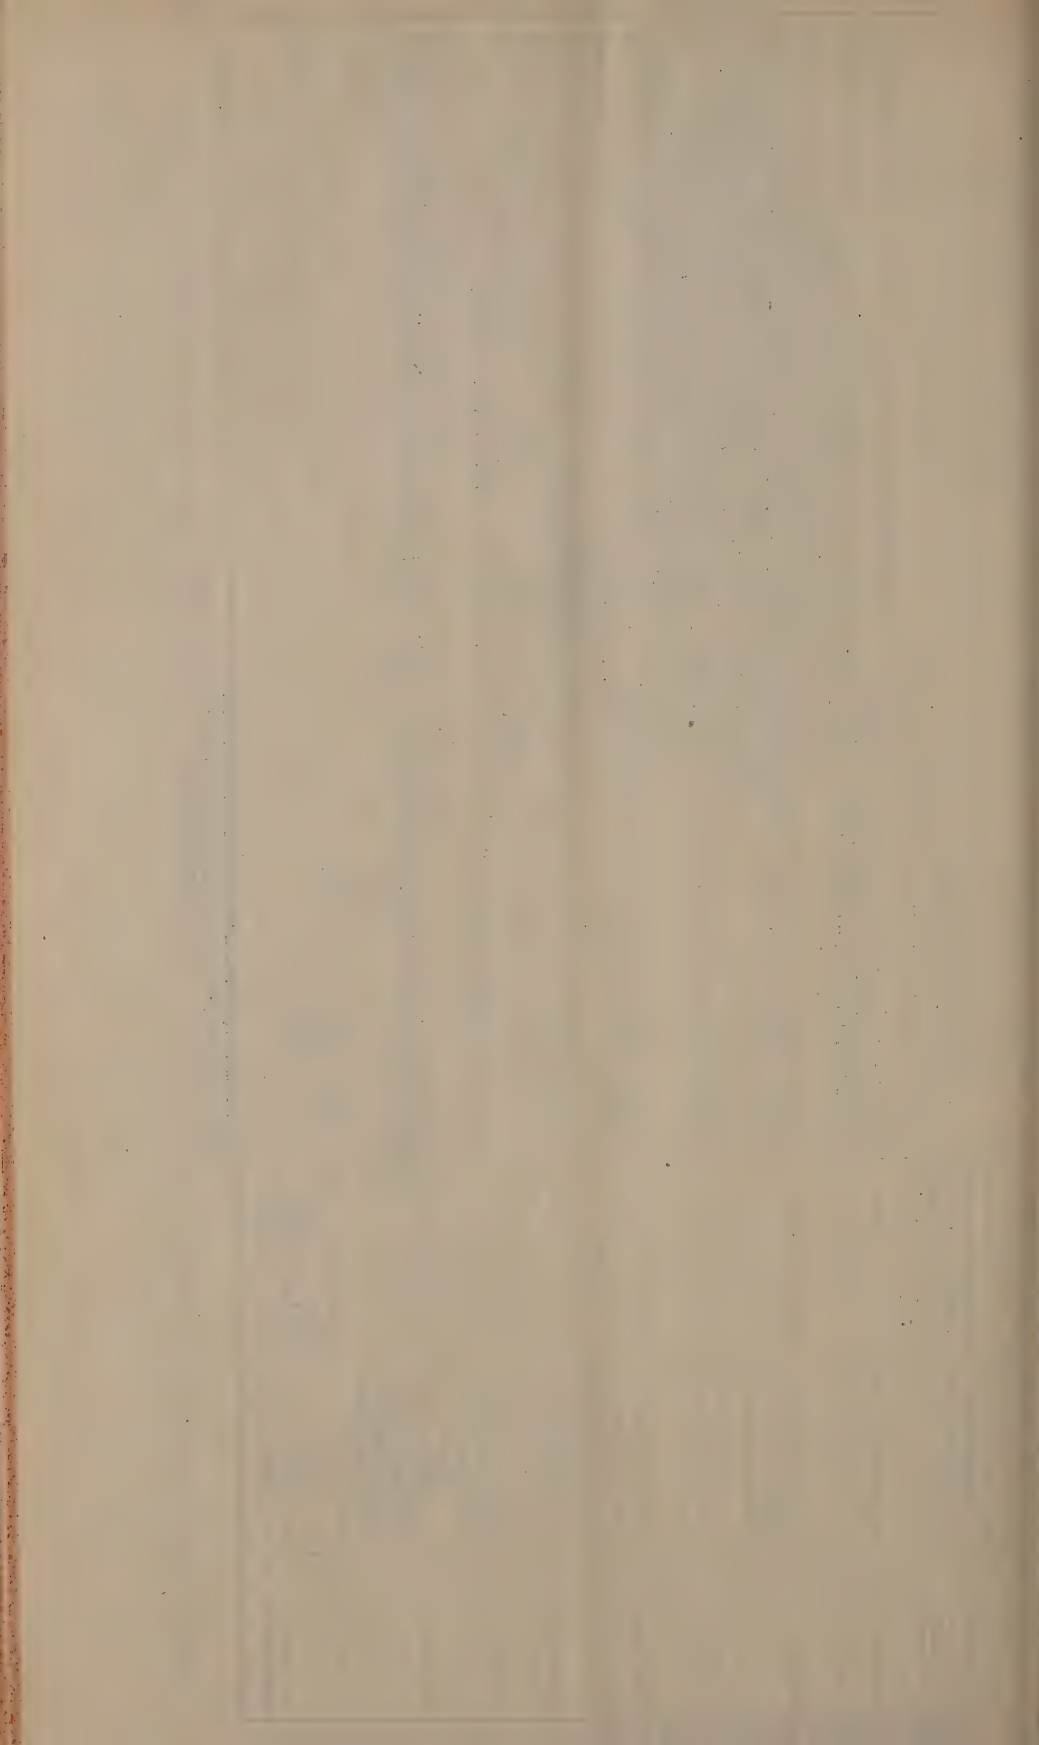

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.65 in. at the beginning of the week to 29.80 in. by 12h. on 4th; decreased generally to 29.44 in. by 9h. on 7th; increased to 29.97 in. by 10h. on 9th; decreased and was 29.69 in. by midnight on the 10th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns : the heading "Diphtheria" includes Membranous Group, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Poli-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 17TH MAY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the twentieth week of the year numbered 7,665 and corresponded to an annual rate of 20·7 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,153 and corresponded to an annual rate of 11·2 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 14·0, 12·4 and 11·2. Infant mortality was 59 per 1,000 births, against 89, 66 and 64 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,716 births, corresponding to a rate of 19·6 per 1,000, and 938 deaths of civilians, corresponding to a rate of 10·7, as against 13·0, 11·4, and 9·7 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 11·2 per 1,000. The infant mortality was 47 as against 67, 53 and 40 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 31 in the total deaths last week, and the deaths from influenza fell from 95 to 73. In London the number of deaths from all causes increased from 850 to 938; while the deaths from diphtheria, which had been 12, 13 and 7 in the preceding three weeks, were 6 last week, and those from measles, which had been 57, 40 and 21 in the preceding three weeks, rose to 23 last week. The deaths from influenza, which had been 21, 27 and 11 in the three preceding weeks, fell to 5 last week.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

			27	28	

The times used are from midnight to midnight, or Greenwich Mean Time (Civil Reckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.69 in. at the beginning of the week to 29.73 in. by 11h. on 11th; decreased to 29.57 in. by 3h. on 12th; increased generally to 29.93 in. by 21h. on 13th; decreased to 29.82 in. by 10h. on 14th; increased generally to 30.14 in. by 7h. on 17th; decreased and was 29.95 in. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Poli-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 24TH MAY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the twenty-first week of the year numbered 7,212 and corresponded to an annual rate of 19·5 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,934 and corresponded to an annual rate of 10·6 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 12·4, 11·2 and 11·2. Infant mortality was 68 per 1,000 births, against 66, 64 and 59 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,675 births, corresponding to a rate of 19·1 per 1,000, and 832 deaths of civilians, corresponding to a rate of 9·5, as against 11·4, 9·7, and 10·7 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 10·3 per 1,000. The infant mortality was 41 as against 53, 40 and 47 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 219 in the total deaths last week, and the deaths from influenza fell from 73 to 67. In London the number of deaths from all causes decreased from 938 to 832; while the deaths from diphtheria, which had been 13, 7 and 6 in the preceding three weeks, rose to 9 last week, and those from measles, which had been 40, 21 and 23 in the preceding three weeks, fell to 17 last week. One death from small-pox was registered in Middlesbrough, C.B.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.
‡ Including 1 death from small-pox.

SATURDAY	24	wP till 8h.; variable till 14h.; then wP.	3.6	15.9	Overcast or nearly overcast. Few cloudy periods in forenoon, and 14h. till 19h. Rain 8h. till 9h. Shower 11h., rain 12h. till 14h. and shower 23h. Brisk wind 10h. till 17h.
No. of Col.		28	Sum 32.2	Sum 110.7	
			27	28	

The times used are from midnight to midnight, or Greenwich Mean Time (Civil reckoning).
The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., 1p.m., 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records of the dry bulb thermometer, 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.95 in. at the beginning of the week to 29.53 in. by 4h. on 19th; increased generally to 29.76 in. by 13h. on 22nd; decreased to 29.22 in. by 13h. on 24th; increased and was 29.38 in. by midnight of the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 31st MAY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the twenty-second week of the year numbered 7,552 and corresponded to an annual rate of 20·4 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,770 and corresponded to an annual rate of 10·2 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 11·2, 11·2 and 10·7. Infant mortality was 62 per 1,000 births, against 64, 59 and 68 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,656 births, corresponding to a rate of 18·9 per 1,000, and 780 deaths of civilians, corresponding to a rate of 8·9, as against 9·7, 10·7, and 9·5 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·7 per 1,000. The infant mortality was 48 as against 40, 47 and 41 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 165 in the total deaths last week, and the deaths from influenza fell from 67 to 52. In London the number of deaths from all causes decreased from 832 to 780; while the deaths from diphtheria, which had been 7, 6 and 9 in the preceding three weeks, were 10 last week, and those from measles, which had been 21, 23 and 17 in the preceding three weeks, fell to 12 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

No. of Col.	..	Sum 61.6	Sum 112.7	28

The times used are from midnight to midnight, or Greenwich Mean Time (Civil Reckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean, daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily values of point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 60 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.38 in. at the beginning of the week to 29.47 in. by 21h. on May 27th; decreased to 29.56 in. by 22h. on May 28th; increased to 29.77 in. by 3h. on May 31st; decreased and was 29.52 in. at midnight of the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns : the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 7TH JUNE, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the twenty-third week of the year numbered 7,340 and corresponded to an annual rate of 19·8 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,649 and corresponded to an annual rate of 9·9 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 11·2, 10·7 and 10·2. Infant mortality was 59 per 1,000 births, against 59, 68 and 62 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,646 births, corresponding to a rate of 18·8 per 1,000, and 778 deaths of civilians, corresponding to a rate of 8·9, as against 10·7, 9·5, and 8·9 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·5 per 1,000. The infant mortality was 47 as against 47, 41 and 48 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 120 in the total deaths last week, and the deaths from influenza fell from 53 to 46. In London the number of deaths from all causes decreased from 780 to 778; while the deaths from diphtheria, which had been 6, 9 and 10 in the preceding three weeks, fell to 8 last week, and those from measles, which had been 23, 17 and 12 in the preceding three weeks, further fell to 6 last week.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
JUNE.					
SUNDAY ..	1 v till 1h.; wP till 15h.; v till 16h.; mP till 21h.; then v.	7.2	16.2	Overcast generally, with cloudy periods. Rain till 24h., shower 9h., and rain from 21h. Bisk wind 2h. till 16h.	
MONDAY ..	2 wP till 6h.; mP and v. till 21h.; then wP.	1.9	16.3	Overcast generally. Rain till 1h., frequently 14h. till 13h., and heavy rain till 13h., damping afterwards till 21h. Thunder and lightning 17h. till 17.30.	
TUESDAY ..	3 wP till 6h.; mP till 9h.; wP till 18h.; then loss of register.	6.3	16.3	Overcast generally. Cloudy period 9h. till 13h. Rain 18h. till 19h., then damping till 21h.	
WEDNESDAY	4 Loss of Register till 7h.; then wP.	0.1	16.3	Overcast. Rain from 11h.	
THURSDAY	5 wP.	6.1	16.4	Overcast, with cloudy periods till 15h., then little cloud. Thin cloud prevalent 19h. till 21h. Slight rain till 3h.	
FRIDAY ..	6 wP	5.9	16.4	Variably cloudy becoming overcast by 18h. Slight rain at 19h., and from 21h. till 22h.	
SATURDAY	7 wP till 20h.; wN till 22h.; then variably sN and sP.	1.5	16.4	Overcast generally. Slight rain at 0h., 15h., and 20h., and from 21h.	
No. of Col.	26	Sum 29.0	Sum 114.3	27	28

The times used are from midnight to midnight, or Greenwich Mean Time (Civil Reckoning).

The height of the cistern of the barometer is 153 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the aid of these corrections the mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1906.

The reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.52 in. at the beginning of the week to 29.99 in. by 7h. on 3rd; decreased to 29.70 in. by 20h. on 4th; increased to 30.01 in. by 8h. on 6th; decreased and was 29.73 in. by midnight on the 7th.

1924. No. 24.

WEEKLY RETURN
OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES AND OTHER
GREAT TOWNS

AND OF

CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN AND RURAL
DISTRICTS AND PORT SANITARY DISTRICTS

IN

ENGLAND AND WALES

DURING THE WEEK ENDED

SATURDAY, 14TH JUNE, 1924.

Issued by the Registrar General.

LONDON:

PRINTED & PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Imperial House, Kingsway, London, W.C.2; 28, Abingdon Street, London, S.W.1;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

or 120, George Street, Edinburgh;

or through any Bookseller.

Price 1s. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 14TH JUNE, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the twenty-fourth week of the year numbered 6,404 and corresponded to an annual rate of 17·3 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,482 and corresponded to an annual rate of 9·4 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 10·7, 10·2 and 9·9. Infant mortality was 63 per 1,000 births, against 68, 62 and 59 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,516 births, corresponding to a rate of 17·3 per 1,000, and 804 deaths of civilians, corresponding to a rate of 9·2, as against 9·5, 8·9, and 8·9 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·1 per 1,000. The infant mortality was 47 as against 41, 48 and 47 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 167 in the total deaths last week. In London the number of deaths from all causes increased from 778 to 804; while the deaths from diphtheria, which had been 9, 10 and 8 in the preceding three weeks, rose to 14 last week, and those from measles, which had been 17, 12 and 6 in the preceding three weeks, rose to 8 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

SUNDAY ..	8	6.8	16.4	Cloudy generally. Frequent rain before 8h. Showers between 13h. and 15h. and at 18h. Brisk wind 13h. till 15h. Squall 15h.	
MONDAY ..	9	1.5	16.4	Nearly overcast generally. Rain from 23h.	
TUESDAY ..	10	4.3	16.5	Nearly overcast. Slight rain till 2h. and from 14h. till 15h. Damping 23h. Solar halo 12h.	
WEDNESDAY	11	4.3	16.5	Overcast, with cloudy period between 15h. and 17h. Damping 1h. and 23h. Rain 4h., and frequently from 7h. till 15h. Shower 22h.	
THURSDAY	12	2.8	16.5	Nearly overcast. Rain 2h. till 3h. and frequently from 10h. till 21h. Occasional thunder between 8h. and 14h. and between 18h. and 18h.	
FRIDAY ..	13	2.4	16.5	Overcast. Slight rain 3h. till 4h., and from 8h. till 9h.	
SATURDAY	14	6.1	16.5	Overcast till 13h., clearing to cloudless by 15h. Haze from 15h.	
		Sum 28.2	Sum 115.3		
No. of Col.	..	27	28		

The times used are from midnight to midnight, or Greenwich Mean Time (Civil Reckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1918.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.73 in. at the beginning of the week to 29.71 in. by 4h. on 8th; increased to 29.85 in. by 8h. on 9th; decreased to 29.28 in. by 4h. on 12th; increased to 30.13 in. by 10h. on 14th; decreased and was 30.10 in. by midnight on the same day.

1924. No. 25.

WEEKLY RETURN

OF

BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES AND OTHER
GREAT TOWNS

AND OF

CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN AND RURAL
DISTRICTS AND PORT SANITARY DISTRICTS

IN

ENGLAND AND WALES

DURING THE WEEK ENDED

SATURDAY, 21ST JUNE, 1924.

Issued by the Registrar General.

LONDON:

PRINTED & PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Imperial House, Kingsway, London, W.C.2; 28, Abingdon Street, London, S.W.1;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

or 120, George Street, Edinburgh;

or through any Bookseller.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 21ST JUNE, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the twenty-fifth week of the year numbered 8,263 and corresponded to an annual rate of 22·3 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,700 and corresponded to an annual rate of 10·0 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 10·2, 9·9 and 9·4. Infant mortality was 54 per 1,000 births, against 62, 59 and 63 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,847 births, corresponding to a rate of 21·1 per 1,000, and 798 deaths of civilians, corresponding to a rate of 9·1, as against 8·9, 8·9, and 9·2 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·0 per 1,000. The infant mortality was 41 as against 48, 47 and 47 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 218 in the total deaths last week. In London the number of deaths from all causes decreased from 804 to 798; while the deaths from diphtheria, which had been 10, 8 and 14 in the preceding three weeks, fell to 8 last week, and those from measles, which had been 12, 6 and 8 in the preceding three weeks, rose to 13 last week.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE. JUNE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SUNDAY ..	15 Loss of Register till 5½h.; then wP.	10·9	16·5	Nearly cloudless generally. Haze 9h. till 2½h.	<p>The times used are from midnight to midnight, or Greenwich Mean Time (Civil Beckoning).</p> <p>The height of the cistern of the barometer is 152 feet above the mean level of the sea : no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 55 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are :—P. positive ; N. negative ; w. weak ; m. moderate ; s. strong ; and v. variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.</p> <p>The reading of the barometer decreased from 30·10 in. at the beginning of the week to 29·54 in. by 19h. on 17th ; increased generally to 29·91 in. by midnight on the 21st.</p>
MONDAY ..	16 wP	10·8	16·5	Partially cloudy, becoming nearly overcast by 2½h. Solar halos between 9h. and 15h. Lunar halo at 22h.	
TUESDAY ..	17 wP	4·9	16·6	Nearly overcast. Solar halos between 9h. and 12h. Lightning 22h.	
WEDNESDAY	18 wP till 22½h., then wN.	8·3	16·6	Nearly overcast. Lunar halo 2h. Rain 2½h. till 23½h.	
THURSDAY	19 wN till 0½h., then wP.	12·7	16·6	Partially cloudy, becoming nearly cloudless by 19½h.	
FRIDAY ..	20 wP till 8½h.; mP till 17½h.; variably mN and mP till 19h.; wN till 20h.; then wP.	1·0	16·6	Overcast generally, clearing from 20h. to cloudless by 22h. Slight shower 6h. Heavy rain 18h. till 19h.	
SATURDAY	21 wP till 6½h.; mP till 9½h.; then wP.	12·7	16·6	Nearly cloudless till 1½h., then partially cloudy. Lightning at 22h.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 28TH JUNE, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the twenty-sixth week of the year numbered 7,682 and corresponded to an annual rate of 20·7 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,621 and corresponded to an annual rate of 9·8 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·9, 9·4 and 10·0. Infant mortality was 55 per 1,000 births, against 59, 63 and 54 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,829 births, corresponding to a rate of 20·9 per 1,000, and 840 deaths of civilians, corresponding to a rate of 9·6, as against 8·9, 9·2, and 9·1 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·2 per 1,000. The infant mortality was 43 as against 47, 47 and 41 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 78 in the total deaths last week. In London the number of deaths from all causes increased from 798 to 840; while the deaths from diphtheria, which had been 8, 14 and 8 in the preceding three weeks, were 7 last week, and those from measles, which had been 6, 8 and 13 in the preceding three weeks, fell to 6 last week. One death from small-pox belonging to Middlesbrough C.B. was registered during the week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas

‡ Including one death from Small-pox.

DATE. JUNE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	The times used are from midnight to midnight, or Greenwich Mean Time (Civil Reckoning). The height of the cistern of the barometer is 152 feet above the mean level of the sea : no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from a discussion of the observa- tions made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average. The values given in column 17 are not corrected for the index error of the thermo- meter, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are :- P. positive ; N. negative ; w. weak ; m. moderate ; s. strong ; and v. variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

Price 1s. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 5TH JULY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the twenty-seventh week of the year numbered 7,600 and corresponded to an annual rate of 20·5 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,531 and corresponded to an annual rate of 9·6 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·4, 10·0 and 9·8. Infant mortality was 53 per 1,000 births, against 63, 54 and 55 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,784 births, corresponding to a rate of 20·4 per 1,000, and 733 deaths of civilians, corresponding to a rate of 8·4, as against 9·2, 9·1, and 9·6 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·1 per 1,000. The infant mortality was 39 as against 47, 41 and 43 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 90 in the total deaths last week. In London the number of deaths from all causes decreased from 840 to 733; while the deaths from diphtheria, which had been 14, 8 and 7 in the preceding three weeks, fell to 5 last week. Three deaths from small-pox belonging to Willesden were registered during the week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

‡ Including three deaths from Small-pox.

		27	28		

The times used are from midnight to midnight, or Greenwich Mean Time (Olivill Reckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 60 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily value of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.84 in. at the beginning of the week to 29.69 in. by 3h. on June 30th; increased to 29.83 in. by 4h. on July 1st; decreased generally to 29.08 in. by 18h. on July 3rd; increased generally and was 29.63 in. by midnight on the 5th.

1924. No. 28.

WEEKLY RETURN

OF

BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES AND OTHER
GREAT TOWNS

AND OF

CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN AND RURAL
DISTRICTS AND PORT SANITARY DISTRICTS

IN

ENGLAND AND WALES

DURING THE WEEK ENDED

SATURDAY, 12TH JULY, 1924.

Issued by the Registrar General.

LONDON:

PRINTED & PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Imperial House, Kingsway, London, W.C.2; 28, Abingdon Street, London, S.W.1;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

or 120, George Street, Edinburgh;

or through any Bookseller.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 12TH JULY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the twenty-eighth week of the year numbered 7,679 and corresponded to an annual rate of 20·7 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,466 and corresponded to an annual rate of 9·4 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 10·0, 9·8 and 9·6. Infant mortality was 52 per 1,000 births, against 54, 55 and 53 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,694 births, corresponding to a rate of 19·3 per 1,000, and 763 deaths of civilians, corresponding to a rate of 8·7, as against 9·1, 9·6, and 8·4 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·0 per 1,000. The infant mortality was 43 as against 41, 43 and 39 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 65 in the total deaths last week. In London the number of deaths from all causes increased from 733 to 763; while the deaths from diphtheria, which had been 8, 7 and 5 in the preceding three weeks, rose to 9 last week.

* Population adjusted by the exclusion of non-civilians.

The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from outside the respective areas.

			27	28	

The times used are from midnight to midnight, or Greenwich Mean Time (Civil Beckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 8h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1910.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29·63 in. at the beginning of the week to 29·94 in. by 7h. on 8th; decreased to 29·77 in. by 5h. on 9th; increased to 30·03 in. by 7h. on 11th; decreased to 29·67 in. by 18h. on 12th; increased and was 29·71 in. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 19TH JULY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the twenty-ninth week of the year numbered 7,375 and corresponded to an annual rate of 19·9 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,292 and corresponded to an annual rate of 8·9 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·8, 9·6 and 9·4. Infant mortality was 49 per 1,000 births, against 55, 53 and 52 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,718 births, corresponding to a rate of 19·6 per 1,000, and 750 deaths of civilians, corresponding to a rate of 8·6, as against 9·6, 8·4, and 8·7 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 8·8 per 1,000. The infant mortality was 42 as against 43, 39 and 43 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 174 in the total deaths last week. In London the number of deaths from all causes decreased from 763 to 750; while the deaths from diphtheria, which had been 7, 5 and 9 in the preceding three weeks, were 8 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from that the respective areas.

SUNDAY .. 13	wP	9.7	16.2	Nearly overcast till 6h., very cloudy till 14h., then cloudless or little cloud. Brisk wind 11h. till 21h. Shower 13h.
MONDAY .. 14	wP	15.0	16.1	Cloudless generally. Haze during day.
TUESDAY .. 15	wP	13.8	16.1	Cloudless generally. Cloudy, thin cloud, 12h. till 17h.
WEDNESDAY 16	wP till 15h.; then mP	6.1	16.1	Overcast by 3h. Clearing at noon, to partially cloudy by 15h. Very cloudy after 23h.
THURSDAY 17	wP till 18h.; v till 22h.; then wP.	4.4	16.1	Variably cloudy till 9h., then overcast. Slight rain 14h. till 16h., then heavy rain till 10h. Brisk wind from 22h.
FRIDAY .. 18	wP till 10h.; mP till 23h.; then wP.	5.2	16.0	Nearly overcast, with cloudy periods. Little cloud 3h. till 6h. Rain 16h. till 17h. Brisk wind till 2h.
SATURDAY 19	wP and mP	7.0	16.0	Overcast or nearly overcast till 9h., cloudy or very cloudy till 19h., nearly cloudless by 20h. Occasional showers till 13h.
No. of Col.	26	Sum 81.2	Sum 112.6	28

The times used are from midnight to midnight, or Greenwich Mean Time (Civil reckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 55 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.71 in. at the beginning of the week to 30.17 in. by 10h. on 14th; decreased generally to 29.31 in. by 22h. on 17th; and increased generally to 29.81 in. by midnight of July 19th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 26TH JULY, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the thirtieth week of the year numbered 7,394 and corresponded to an annual rate of 20·0 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,304 and corresponded to an annual rate of 8·9 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·6, 9·4 and 8·9. Infant mortality was 52 per 1,000 births, against 53, 52 and 49 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,648 births, corresponding to a rate of 18·8 per 1,000, and 729 deaths of civilians, corresponding to a rate of 8·3, as against 8·4, 8·7, and 8·6 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 8·5 per 1,000. The infant mortality was 44 as against 39, 43 and 42 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 12 in the total deaths last week. In London the number of deaths from all causes decreased from 750 to 729; while the deaths from diphtheria, which had been 5, 9 and 8 in the preceding three weeks, were 7 last week.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE. JULY.	ELECTRICITY. (For explanation of symbols, see note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SUNDAY ..	20	9.7	15.9	Cloudless till 6h., becoming cloudy or very cloudy by 8h.	<p>The times used are from midnight to midnight, or Greenwich Mean Time (Civil Reckoning). The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers forming the mean daily value of the temperature of the air (column 8). The mean daily value of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and "lower" than the average. The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: +, P. positive; -, N. negative; w. weak; m. moderate; s. strong; and v. variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.</p> <p>The reading of the barometer decreased generally from 29.81 in. at the beginning of the week to 29.62 in. by 17h. on 22nd; increased generally to 29.83 in. by 10h. on 25th; decreased to 29.66 in. by 2h. on 26th; increased and was 29.90 in. by midnight of July 26th.</p>
MONDAY ..	21	3.6	15.9	Overcast by 1h. Cloudy from 14h. till 18h., then little cloud. Frequent rain till 13h.	
TUESDAY ..	22	4.9	15.8	Nearly cloudless till 1h., very cloudy till 9h., partially cloudy till 12h., then overcast or nearly so. Clearing at 16h., to nearly cloudless by 19h. Slight rain 7h. till 8h., and 13h. till 16h. Thunder 12h. till 15h.	
WEDNESDAY	23	1.7	15.8	Cloudless till 2h., overcast by 3h. Very cloudy period 15h. till 20h.	
THURSDAY	24	8.1	15.7	Overcast till 3h., few clouds by 4h. Clouding up at 7h., to nearly overcast by 9h. Clearing at 10h. to cloudless by 21h. Shower 21h. and showery 12h. till 15h. Brisk wind 11h. till 21h.	
FRIDAY ..	25	5.4	15.7	Little cloud till 7h., very cloudy till noon, then overcast. Rain from 14h.	
SATURDAY	26	3.4	15.7	Overcast or nearly so till 17h., nearly cloudless by 21h. Heavy rain 11h. 20m. till 11h. 40m., slight rain 14h. till 15h., then rain till 16h. 20m., slight rain 17h. Occasional thunder and lightning 14h. till 16h. Mist and haze from 18h.	<p>Sum 110.5</p>

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns : the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 2ND AUGUST, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the thirty-first week of the year numbered 7,726 and corresponded to an annual rate of 20·9 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,267 and corresponded to an annual rate of 8·8 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·4, 8·9 and 8·9. Infant mortality was 48 per 1,000 births, against 52, 49 and 53 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,843 births, corresponding to a rate of 21·0 per 1,000, and 725 deaths of civilians, corresponding to a rate of 8·3, as against 8·7, 8·6, and 8·3 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 8·5 per 1,000. The infant mortality was 35 as against 43, 42 and 44 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 37 in the total deaths last week. In London the number of deaths from all causes decreased from 729 to 725; while the deaths from diphtheria, which had been 9, 8 and 7 in the preceding three weeks, were 8 last week.

Population adjusted by the exclusion of non-civilians.

The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from outside the respective areas.

AUGUST. FRIDAY ..	1	1.4	15.4	Nearly cloudless till 4h., then nearly overcast. Dew in morning. Solar halo 12h. Slight shower at 20 ⁴⁵ h. and 22 ⁴⁵ h.
SATURDAY	2	4.3	15.3	Nearly overcast. Rain 3h., and 6 ⁴⁵ h. till 7h. Showers 9 ⁴⁵ h., and from 12h. till 14h., and at 18h. Thunder about 9h.
No. of Col.	..	Sum 27.2	Sum 108.3	28

The times used are from midnight to midnight, or Greenwich Mean Time (Civil Reckoning).

The height of the cistern of the barometer is 15¹/₂ feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean readings of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1903, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1906.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.90 in. at the beginning of the week to 29.25 in. by 4h. on 28th; increased to 29.85 in. by 22h. on 31st; decreased to 29.62 in. by 7h. on Aug. 2nd; increased and was 29.78 in. by midnight on the same day.

WEEKLY RETURN
OF

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 9TH AUGUST, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the thirty-second week of the year numbered 6,745 and corresponded to an annual rate of 18·2 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,204 and corresponded to an annual rate of 8·7 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In each of the preceding three weeks the rate was 8·9. Infant mortality was 56 per 1,000 births, against 49, 53 and 48 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,514 births, corresponding to a rate of 17·3 per 1,000, and 731 deaths of civilians, corresponding to a rate of 8·4, as against 8·6, 8·3, and 8·3 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 8·4 per 1,000. The infant mortality was 49 as against 42, 44 and 35 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 66 in the total deaths last week. In London the number of deaths from all causes increased from 725 to 731; while the deaths from diphtheria, which had been 8, 7 and 8 in the preceding three weeks, were 6 last week.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

No. of Col.	26	Sum 37.9	Sum 105.6	

The times used are from midnight to midnight, or Greenwich Mean Time (Civil reckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1911.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be ascertained.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.79 in. at the beginning of the week to 29.82 in. by 11h. on 3rd; decreased to 29.61 in. by 3h. on 4th; increased generally to 30.27 in. by 9h. on 8th; decreased and was 30.20 in. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 16TH AUGUST, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the thirty-third week of the year numbered 7,965 and corresponded to an annual rate of 21·5 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,344 and corresponded to an annual rate of 9·1 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 8·9, 8·9 and 8·7. Infant mortality was 51 per 1,000 births, against 53, 48 and 56 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,818 births, corresponding to a rate of 20·7 per 1,000, and 716 deaths of civilians, corresponding to a rate of 8·2, as against 8·3, 8·3, and 8·4 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 8·3 per 1,000. The infant mortality was 42 as against 44, 35 and 49 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 140 in the total deaths last week. In London the number of deaths from all causes decreased from 731 to 716; while the deaths from diphtheria, which had been 7, 8 and 6 in the preceding three weeks, were again 6 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS	
AUGUST.					
SUNDAY .. 10	wP	12.1	14.9	Variably cloudy. Solar halo generally from 14h. till 17h. Lunar halo 20h. till 21h. Dew at night.	<p>The results given are from midnight to midnight, or Greenwich Mean Time (Civil Reckoning). The height of the cistern of the barometer is 152 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 56 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.</p> <p>The reading of the barometer decreased from 30.20 in. at the beginning of the week to 29.48 in. by 16h. on 12th; increased generally to 29.74 in. by 13h. on 15th; decreased and was 29.40 in. by midnight on the 16th</p>
MONDAY .. 11	wP	10.0	14.8	Partially cloudy becoming very cloudy by 14h.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns : the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Poli-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 23RD AUGUST, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the thirty-fourth week of the year numbered 7,532 and corresponded to an annual rate of 20·3 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,376 and corresponded to an annual rate of 9·1 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 8·9, 8·7 and 9·1. Infant mortality was 56 per 1,000 births, against 48, 56 and 51 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,777 births, corresponding to a rate of 20·3 per 1,000, and 785 deaths of civilians, corresponding to a rate of 9·0, as against 8·3, 8·4 and 8·2 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 8·5 per 1,000. The infant mortality was 52 as against 35, 49 and 42 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 32 in the total deaths last week. In London the number of deaths from all causes increased from 716 to 785; while the deaths from diphtheria, which had been 8, 6 and 6 in the preceding three weeks, were 10 last week. One death from small-pox belonging to Barnsley was registered during the week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and east are corrected by the exclusion of deaths of persons admitted into public institutions from about the respective areas.

‡ Including one death from Small-pox.

The results given are from midnight to midnight, Greenwich Mean Time (Civil Reckoning).
 The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
 Observations are usually taken at 9h. A.M., noon, 3h. P.M. and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.
 The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1916.
 In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
 The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
 The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.
 The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.40 in. at the beginning of the week to 29.11 in. by 23h. on 17th; increased to 29.41 in. by 22h. on 18th; decreased to 29.31 in. by 18h. on 20th; increased and was 29.66 in. by midnight on the 23rd.

1924. No. 35.

WEEKLY RETURN
OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES AND OTHER
GREAT TOWNS

AND OF

CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN AND RURAL
DISTRICTS AND PORT SANITARY DISTRICTS

IN

ENGLAND AND WALES

DURING THE WEEK ENDED

SATURDAY, 30TH AUGUST, 1924.

Issued by the Registrar General.

LONDON:

PRINTED & PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Imperial House, Kingsway, London, W.C.2; 28, Abingdon Street, London, S.W.1;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

or 120, George Street, Edinburgh;

or through any Bookseller.

Price 1s. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 30TH AUGUST, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the thirty-fifth week of the year numbered 7,352 and corresponded to an annual rate of 19·8 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,276 and corresponded to an annual rate of 8·9 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 8·7, 9·1 and 9·1. Infant mortality was 58 per 1,000 births, against 56, 51 and 56 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,718 births, corresponding to a rate of 19·6 per 1,000, and 744 deaths of civilians, corresponding to a rate of 8·5, as against 8·4, 8·2 and 9·0 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 8·5 per 1,000. The infant mortality was 47 as against 49, 42 and 52 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 98 in the total deaths last week. In London the number of deaths from all causes decreased from 784 to 744; while the deaths from diphtheria, which had been 6, 6 and 10 in the preceding three weeks, fell to 8 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

SUNDAY ..	24 w P till 8½h.; w N till 9½h.; w P till 13½h.; variably m N and s N till 17½h.; then w P.	0.2	14.0	Overcast with nearly cloudless interval between 1h. and 3h. Rain 7½h. till 12h.; 13½h. till 14½h.; and between 15½h. and 17h.
MONDAY ..	25 v P till 5h.; m P till 17h.; then w P.	0.3	14.0	Nearly overcast with nearly cloudless break from 21½h. till 23h. Slight rain at 16½h. Misty rain 19½h. till 20h.
TUESDAY ..	26 w P till 8h.; m P till 20h.; then w P.	0.0	13.9	Overcast. Slight showers about 15h., and 22½h. Dew and slight haze at night.
WEDNESDAY	27 w P till 11h.; m P till 19½h.; then w P.	4.6	13.8	Nearly overcast with cloudless period between 7h. and 8h. and from 22h. Slight showers at 12h. and 18h.
THURSDAY	28 w P till 17½h. Then loss of Register.	0.7	13.8	Nearly overcast till 3h. then nearly overcast. Occasional slight rain from 15h.
FRIDAY ..	29 Loss of Register till 11½h.; then w P.	1.5	13.7	Nearly overcast throughout. Rain till 23½h. and from 6½h. till 8½h. Occasional slight rain between 9h. and 10h. and from 18h.
SATURDAY	30 w P till 4h. Loss of Register till 10½h.; then w P.	2.4	13.7	Overcast. Damping 3½h. till 5½h., and at 8½h. Rain 12½h. till 13½h., and from 19½h. till 22½h.
No. of Col.	..	Sum 9.7	Sum 98.9	

The results given are from midnight to midnight, Greenwich Mean Time (Civil Reckoning).
The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M. and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.65 in. at the beginning of the week to 30.00 in. by 13h. on 25th; decreased to 29.75 in. by 6h. on 27th; increased to 29.86 in. by 9h. on 28th; decreased generally to 29.43 in. by 15h. on 30th; increased and was 29.56 in. by midnight on the same day.

1924. No. 36.

WEEKLY RETURN
OF
BIRTHS AND DEATHS
REGISTERED IN COUNTY BOROUGHES AND OTHER
GREAT TOWNS
AND OF
CASES OF CERTAIN SPECIFIED
INFECTIOUS DISEASES
NOTIFIED IN BOROUGHES, URBAN AND RURAL
DISTRICTS AND PORT SANITARY DISTRICTS
IN
ENGLAND AND WALES
DURING THE WEEK ENDED
SATURDAY, 6TH SEPTEMBER, 1924.

Issued by the Registrar General.

LONDON:

PRINTED & PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Imperial House, Kingsway, London, W.C.2; 28, Abingdon Street, London, S.W.1;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

or 120, George Street, Edinburgh;

or through any Bookseller.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Group, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 6TH SEPTEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the thirty-sixth week of the year numbered 7,349 and corresponded to an annual rate of 19·8 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,347 and corresponded to an annual rate of 9·1 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·1, 9·1 and 8·9. Infant mortality was 62 per 1,000 births, against 51, 56 and 58 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,728 births, corresponding to a rate of 19·7 per 1,000, and 796 deaths of civilians, corresponding to a rate of 9·1, as against 8·2, 9·0 and 8·5 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 8·7 per 1,000. The infant mortality was 60 as against 42, 52 and 47 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 71 in the total deaths last week. In London the number of deaths from all causes increased from 744 to 796; the deaths from diphtheria, which had been 6, 10 and 8 in the preceding three weeks, rose to 12 last week, and the deaths from infantile diarrhoea which had been 16, 22 and 25 in the preceding three weeks, further increased to 30. A death from typhus belonging to St. Helens C.B. was registered during the week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

Table 2.—LONDON and certain CITIES in the } BIRTHS and DEATHS for last available period

The results given are from midnight to midnight, Greenwich Mean Time (Civil Reckoning). The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905; and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average. The values given in column 17 are not corrected for the index error of the thermometer which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.
The reading of the barometer increased from 28·55 in. at the beginning of the week to 30·04 in. by 23h. on 2nd; decreased and was 29·52 in. by midnight on the 6th.

The results given are from midnight to midnight, Greenwich Mean Time (Civil Reckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate;

s. strong, and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29·55 in. at the beginning of the week to 30·04 in. by 23h. on 2nd; decreased and was 29·52 in. by midnight on the 6th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 13TH SEPTEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the thirty-seventh week of the year numbered 6,951 and corresponded to an annual rate of 18·8 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,519 and corresponded to an annual rate of 9·5 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·1, 8·9 and 9·1. Infant mortality was 69 per 1,000 births, against 56, 58 and 62 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,627 births, corresponding to a rate of 18·6 per 1,000, and 825 deaths of civilians, corresponding to a rate of 9·4, as against 9·0, 8·5 and 9·1 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·0 per 1,000. The infant mortality was 66 as against 52, 47 and 60 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 175 in the total deaths last week. In London the number of deaths from all causes increased from 796 to 825; the deaths from diphtheria, which had been 10, 8 and 12 in the preceding three weeks, fell to 7 last week, and the deaths from infantile diarrhoea which had been 22, 25 and 30 in the preceding three weeks, declined to 23. A death from typhus belonging to St. Helens C.B. was registered during the week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and London are corrected by the exclusion of deaths of persons admitted into public institutions from throughout the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SEPTEMBER.					
SUNDAY .. 7	wP	0.4	13.1	Overcast generally. Slight shower 3 ³⁰ h. till 4h. Rain 9 ¹⁵ h. to 11h.; 15 ³⁰ h. till 16 ³⁰ h. Heavy shower about 20h.	<p>The results given are from midnight to midnight, Greenwich Mean Time (Civil Reckoning). The height of the cistern of the barometer is 152 feet above the mean level of the sea : no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average. The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are :—P. positive ; N. negative ; w. weak ; m. moderate ; s. strong ; and v. variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.</p> <p>The reading of the barometer decreased from 29.52 in. at the beginning of the week to 29.45 in. by 8¹⁵h. on 7th; increased to 29.50 in. by 20^h. on 8th; decreased to 29.20 in. by 11^h. on 9th; increased to 29.78 in. by 16^h. on 10th; decreased to 29.51 in. by 16^h. on 11th; increased to 29.69 in. by 12^h. on 12th; decreased and was 29.65 in. by midnight on the 13th.</p>
MONDAY .. 8	wP till 1h.; variably sN and sP till 2h.; wP till 18 ³⁰ h.; then loss of register.	10.8	13.1	Variably cloudy till 9h.; then partially cloudy becoming nearly overcast by 21 ^h . Rain 1h. till 2h. Slight snow 21 ⁴⁵ h. Thunder and lightning about 1h. Brisk wind 12 ^h . till 16 ^h .	
TUESDAY .. 9	Loss of register till 7 ¹⁵ h.; wP till 13 ³⁰ h.; variably sN and sP till 18 ³⁰ h.; then wP.	5.7	13.0	Nearly overcast. Rain 4 ³⁰ h. till 6 ^h . and occasionally between 13 ^h . and 18 ^h . Showers 9 ³⁰ h. and 11 ³⁰ h. Thunder and lightning 13 ³⁰ h. till 13 ⁴⁵ h.	
WEDNESDAY 10	wP	7.2	13.0	Nearly overcast till 12 ^h ., then variably cloudy. Slight shower 7 ⁴⁵ h. Mist and dew in evening.	
THURSDAY 11	wP	3.7	12.9	Partially cloudy till 2 ^h .; overcast till 14 ³⁰ h., clearing to partially cloudy by 15 ^h . Slight rain 8 ³⁰ h. till 9 ^h .; and between 13 ⁴⁵ h. and 14 ⁴⁵ h.	
FRIDAY .. 12	wP	1.7	12.8	Nearly overcast generally. Heavy shower 10 ⁴⁵ h. Slight rain at 11 ³⁰ h.; 16 ^h . and 18 ⁴⁵ h. Frequent damping from 21 ^h .	
SATURDAY 13	Variably wP and wN till 7 ¹⁵ h.; wP till 22 ³⁰ h.; then loss of register.	2.6	12.7	Nearly overcast. Rain till 1 ^h . and from 4 ⁴⁵ h. till 6 ^h . Slight showers at 11 ^h . and 11 ⁴⁵ h.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 20TH SEPTEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the thirty-eighth week of the year numbered 7,207 and corresponded to an annual rate of 19·5 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,368 and corresponded to an annual rate of 9·1 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 8·9, 9·1 and 9·5. Infant mortality was 63 per 1,000 births, against 58, 62 and 69 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,639 births, corresponding to a rate of 18·7 per 1,000, and 771 deaths of civilians, corresponding to a rate of 8·8, as against 8·5, 9·1 and 9·4 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·0 per 1,000. The infant mortality was 56 as against 47, 60 and 66 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 149 in the total deaths last week. In London the number of deaths from all causes decreased from 825 to 771; the deaths from diphtheria, which had been 8, 12 and 7 in the preceding three weeks, were 8 last week, and the deaths from infantile diarrhoea which had been 25, 30 and 23 in the preceding three weeks, rose to 28. A death from typhus belonging to St. Helens C.B. was registered during the week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SEPTEMBER.					
SUNDAY .. 14	Variably wP and wN till 7h.; then wP.	8·8	12·7	Overcast till 8h., then partially cloudy. Rain generally till 7½h. Haze and dew at night.	<p>The results given are from midnight to midnight, Greenwich Mean Time (Civil Reckoning).</p> <p>The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 60 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and "lower" than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.</p> <p>The reading of the barometer increased from 29·65 in. at the beginning of the week to 30·02 in. by 8h. on 15th; decreased to 29·71 in. by 15h. on 17th; increased to 30·01 in. by 23h. on 18th; decreased to 29·28 in. by 22h. on 20th; increased and was 29·31 in. by midnight on the same day.</p>
MONDAY .. 15	wP	1·6	12·6	Partially cloudy, becoming overcast by 6½h. Slight rain about 2½h., and from 23½h.	
TUESDAY .. 16	wP	3·6	12·6	Nearly overcast generally. Rain till 1h. Occasional rain from 19h. till 25h. Brisk wind from 23h.	
WEDNESDAY 17	wP	0·1	12·5	Overcast. Brisk wind till 4h. Frequent damping between 18½h. and 21h., then heavy rain till 21½h.	
THURSDAY 18	wP	9·3	12·4	Overcast till 2h.; then nearly cloudless, becoming partially cloudy by 10½h.	
FRIDAY .. 19	wP	3·6	12·4	Nearly cloudless till 1h., then nearly overcast. Lunar halo 3h., till 4h. Solar halo at 12h. Slight shower at 23½h.	
SATURDAY 20	wP	0·4	12·3	Overcast generally. Frequent slight rain between 12h. and 21h. Brisk wind from 1½h.	<p>Sum 27·4</p> <p>Sum 87·5</p>

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Poliomyelitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 27TH SEPTEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the thirty-ninth week of the year numbered 6,688 and corresponded to an annual rate of 18·1 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,452 and corresponded to an annual rate of 9·3 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·1, 9·5 and 9·1. Infant mortality was 69 per 1,000 births, against 62, 69 and 63 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,516 births, corresponding to a rate of 17·3 per 1,000, and 770 deaths of civilians, corresponding to a rate of 8·8, as against 9·1, 9·4 and 8·8 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·0 per 1,000. The infant mortality was 57 as against 60, 66 and 56 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 83 in the total deaths last week. In London the number of deaths from all causes decreased from 771 to 770; the deaths from diphtheria, which had been 12, 7 and 8 in the preceding three weeks, rose to 11 last week, and the deaths from infantile diarrhoea which had been 30, 23 and 28 in the preceding three weeks, fell to 22.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

The results given are from midnight to midnight, Greenwich Mean Time (Civil Reckoning). The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.	
Observations are usually taken at 9h., A.M., noon, 3h., P.M., and 9h., P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1893. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 55 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1816.	
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.	
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.	
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.	
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.	
The reading of the barometer increased from 29.31 in. at the beginning of the week to 29.57 in. by 12h. on 21st; decreased to 29.35 in. by 7h. on 22nd; increased to 29.62 in. by 20h. on 22nd; decreased to 29.30 in. by 0h. on 24th; increased to 29.56 in. by 21h. on 24th; decreased to 29.46 in. by 15h. on 25th; increased and was 30.15 in. by midnight on the 27th.	

The results given are from midnight to midnight, Greenwich Mean Time (Civil Reckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.31 in. at the beginning of the week to 29.57 in. by 12h. on 21st; decreased to 29.35 in. by 7h. on 22nd; increased to 29.62 in. by 20h. on 22nd; decreased to 29.30 in. by 0h. on 24th; increased to 29.66 in. by 21h. on 24th; decreased to 29.45 in. by 15h. on 25th; increased and was 30.15 in. by midnight on the 27th.

WEEKLY RETURN
OF
BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHES AND OTHER
GREAT TOWNS

AND OF

CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHES, URBAN AND RURAL
DISTRICTS AND PORT SANITARY DISTRICTS

IN

ENGLAND AND WALES

DURING THE WEEK ENDED

SATURDAY, 4TH OCTOBER, 1924.

Issued by the Registrar General.

LONDON:

PRINTED & PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 28, Abingdon Street, London, S.W.1;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

or 120, George Street, Edinburgh;

or through any Bookseller.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 4TH OCTOBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the fortieth week of the year numbered 7,381 and corresponded to an annual rate of 19·9 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,558 and corresponded to an annual rate of 9·6 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·5, 9·1 and 9·3. Infant mortality was 64 per 1,000 births, against 69, 63 and 69 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,741 births, corresponding to a rate of 19·9 per 1,000, and 834 deaths of civilians, corresponding to a rate of 9·5, as against 9·4, 8·8 and 8·8 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·1 per 1,000. The infant mortality was 53 as against 66, 56 and 57 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 106 in the total deaths last week. In London the number of deaths from all causes increased from 770 to 834; the deaths from diphtheria, which had been 7, 8 and 11 in the preceding three weeks, further rose to 18 last week, and the deaths from infantile diarrhoea which had been 23, 28 and 22 in the preceding three weeks, rose to 28.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and fast are corrected by the exclusion of deaths of persons admitted into public institutions from about the respective areas

No. of Col.	..	Sum 22.6	Sum 81.1	28

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong, and v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 30.74 in. at the beginning of the week to 30.17 in. by 8h. on September 28th; decreased to 29.30 in. by 16h. on September 30th; increased to 29.68 in. by 22h. on October 1st; decreased to 29.52 in. by 14h. on October 3rd; increased to 29.67 in. by 13h. on October 4th; decreased and was 29.57 in. by midnight on the same day.

1924. No. 41.

WEEKLY RETURN

OF

BIRTHS AND DEATHS

REGISTERED IN COUNTY BOROUGHS AND OTHER
GREAT TOWNS

AND OF

CASES OF CERTAIN SPECIFIED

INFECTIOUS DISEASES

NOTIFIED IN BOROUGHs, URBAN AND RURAL
DISTRICTS AND PORT SANITARY DISTRICTS

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns : the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 11TH OCTOBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the forty-first week of the year numbered 6,935 and corresponded to an annual rate of 18·7 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,640 and corresponded to an annual rate of 9·9 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·1, 9·3 and 9·6. Infant mortality was 78 per 1,000 births, against 63, 69 and 64 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,647 births, corresponding to a rate of 18·8 per 1,000, and 863 deaths of civilians, corresponding to a rate of 9·9, as against 8·8, 8·8 and 9·5 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·3 per 1,000. The infant mortality was 67 as against 56, 57 and 53 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 82 in the total deaths last week. In London the number of deaths from all causes increased from 834 to 863; the deaths from diphtheria, which had been 8, 11 and 18 in the preceding three weeks, fell to 5 last week, and the deaths from infantile diarrhoea which had been 28, 22 and 28 in the preceding three weeks, were again 28 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

SUNDAY ..	5 wP till 7h.; vari- ably sN and sP till 12h.; wP till 19h.; mN till 20h.; then wP.	0·1	11·3	Nearly overcast throughout. Damping 2h. till 3h. Rain generally from 7h. till 9h.; from 12h. till 12h.; and from 18h. to 20h. Mist 6h. till 11h. Fog 11h. till 12h. Gloom 12h.
MONDAY ..	6 Variably sN and sP till 1h.; wP till 7h.; mP till 11h.; then variably wP and sN.	6·0	11·3	Variably cloudy. Rain 0h. till 2h.; at 12h., and occasionally between 16h. and 20h.
TUESDAY ..	7 wP till 19h.; vari- ably wP and wN till 20h.; then wP.	3·3	11·2	Variably cloudy, becoming overcast by 12h. Rain till 1h. and from 18h. till 22h. Solar halo about 12h.
WEDNESDAY	8 wP till 12h.; wN till 13h.; then wP.	2·0	11·1	Nearly overcast till 15h. then clearing to partially cloudy by 18h. Rain 1h. till 7h. and from 11h. till 13h. Brisk wind 11h. till 16h. Dew at night.
THURSDAY	9 sN till 0h.; wN till 8h.; then wP.	5·2	11·1	Overcast with cloudy interval between 9h. and 13h. Slight rain 6h. till 1h., and occasional damping between 15h. and 17h.
FRIDAY ..	10 wP	5·5	11·0	Overcast till 4h.; partially cloudy till 12h., then overcast. Damping 3h.
SATURDAY	11 wP	0·0	10·9	Overcast. Frequent damping between 9h. and 15h.
No. of Col.	26	Sum 22·1	Sum 77·9	
		27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea ; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1906.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.

The symbols employed are :—P. positive ; N. negative ; w. weak ; m. moderate ; s. strong ; and v. variable.

The numbers in column 27 derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29·57 in. at the beginning of the week to 29·34 in. by 2h. on 5th, increased to 29·61 in. by 9h. on 6th ; decreased to 29·41 in. by 23h. on 6th ; increased to 29·08 in. by 11h. on 7th ; decreased to 29·24 in. by 9h. on 8th ; increased to 29·40 in. by 14h. on 9th ; decreased to 29·77 in. by 3h. on 11th ; increased and was 29·87 in. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 18TH OCTOBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the forty-second week of the year numbered 7,343 and corresponded to an annual rate of 19·8 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,596 and corresponded to an annual rate of 9·7 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·3, 9·6 and 9·9. Infant mortality was 60 per 1,000 births, against 69, 64 and 78 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,592 births, corresponding to a rate of 18·2 per 1,000, and 832 deaths of civilians, corresponding to a rate of 9·5, as against 8·8, 9·5 and 9·9 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·4 per 1,000. The infant mortality was 55 as against 57, 53 and 67 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 44 in the total deaths last week. In London the number of deaths from all causes declined from 863 to 832; the deaths from diphtheria, which had been 11, 18 and 5 in the preceding three weeks, rose to 14 last week, and the deaths from infantile diarrhoea which had been 22, 28 and 28 in the preceding three weeks, fell to 21 last week.

Population adjusted by the exclusion of non-civilians.

The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from outside the respective areas.

OCTOBER.				
SUNDAY .. 12	wP	5.0	10.9	Variably cloudy. Haze from 21h.
MONDAY .. 13	wP	7.9	10.8	Nearly cloudless. Mist till 12h. Fog from 22h. Dew in morning and at night.
TUESDAY .. 14	wP	5.1	10.7	Overcast clearing to cloudless by 11h.; overcast from 12h. Fog till 11h. Heavy dew in morning.
WEDNESDAY 15	wP	0.0	10.7	Overcast. Damping till 2h., and occa- sional slight damping from 20h.
THURSDAY 16	wP	0.0	10.6	Overcast.
FRIDAY .. 17	wP	0.0	10.6	Overcast till 18h., then partially cloudy clearing to cloudless by 22h.
SATURDAY 18	wP till 7h.; mP till 17h., then wP.	5.4	10.5	Nearly cloudless till 19h., then becoming overcast. Mist from 5h. Fog 6h. till 9h., then haze till 12h.
No. of Col.	28	Sum 23.4	Sum 74.8	28

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1803. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1805, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1816.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.87 in. at the beginning of the week to 30.28 in. by 11h. on 14th; decreased to 30.07 in. by 16h. on 16th; increased to 30.17 in. by 22h. on 17th; decreased and was 29.88 in. by midnight on the 18th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 25TH OCTOBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the forty-third week of the year numbered 6,762 and corresponded to an annual rate of 18·3 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 3,578 and corresponded to an annual rate of 9·7 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·6, 9·9 and 9·7. Infant mortality was 66 per 1,000 births, against 64, 78 and 60 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,531 births, corresponding to a rate of 17·5 per 1,000, and 828 deaths of civilians, corresponding to a rate of 9·5, as against 9·5, 9·9 and 9·5 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·6 per 1,000. The infant mortality was 61 as against 53, 67 and 55 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 18 in the total deaths last week. In London the number of deaths from all causes declined from 832 to 828; the deaths from diphtheria, which had been 18, 5 and 14 in the preceding three weeks, fell to 5 last week, and the deaths from infantile diarrhoea which had been 28, 28 and 21 in the preceding three weeks, rose to 26 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas

No. of Col. ..	26	27	Sum 15.0	Sum 71.6	28

The results apply to the Civil Day or from midnight to midnight. The height of the stem of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 60 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: - P. positive; N. negative; W. weak; M. moderate; S. strong, and V. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.86 in. at the beginning of the week to 29.68 in. by 23h. on 18th; increased to 29.71 in. by 21h. on 20th; decreased to 29.46 in. by 1h. on 22nd; increased to 30.27 in. by 10h. on 23rd; decreased and was 29.59 in. by midnight on the 25th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 1st NOVEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the forty-fourth week of the year numbered 6,793 and corresponded to an annual rate of 18·3 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,152 and corresponded to an annual rate of 11·2 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·9, 9·7 and 9·7. Infant mortality was 82 per 1,000 births, against 78, 60 and 66 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,548 births, corresponding to a rate of 17·7 per 1,000, and 897 deaths of civilians, corresponding to a rate of 10·2, as against 9·9, 9·5 and 9·5 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 9·8 per 1,000. The infant mortality was 74 as against 67, 55 and 61 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 574 in the total deaths last week. In London the number of deaths from all causes increased from 828 to 897; the deaths from diphtheria, which had been 5, 14 and 5 in the preceding three weeks, rose to 9 last week, and the deaths from infantile diarrhoea which had been 28, 21 and 26 in the preceding three weeks, rose to 28 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from throughout the respective areas.

OCTOBER.					
SUNDAY	26	wP	0.0	10.0	Overcast, with nearly cloudless interval ab ut 1h. Mist and occasionally rain throughout. Dew in morning.
MONDAY	27	wP till 16h.; vari- ably mN and wP till 17h., then wP.	2.6	9.9	Overcast, generally with cloudy periods between 9h. and 10½h., and from 19h. till 21h. Damping 4h. Rain 14½h. till 18h. Brisk wind from 19h.
TUESDAY	28	wP till 7h.; mP till 15h., then wP.	3.8	9.9	Nearly overcast with occasional cloudy intervals. Rain 2h. to 3h. Heavy shower 14½h. Partial Solar halo 15½h.
WEDNESDAY	29	wP	0.8	9.8	Nearly cloudless till 4½h., then overcast. Shower 6½h. Frequent slight rain from 11½h. till 15h., then rain generally from 17h.
THURSDAY	30	wP till 13½h.; vari- ably sP and sN till 14½h., then wP.	2.2	9.8	Nearly overcast till 14½h.; clearing gradually to cloudless by 23h. Rain 9½h. till 12h. Squalls with heavy rain and hail about 11h., and 13½h. Brisk wind from 10h. Thunder and lightning 13½h.
FRIDAY	31	wP till 7½h.; mP till 12h., then wP.	0.1	9.7	Overcast. Rain 3½h. till 8½h., and from 17h. till 23½h. Mist and gloom from 8½h. till 9½h.
NOVEMBER.	1	wP	0.0	9.6	Overcast with cloudless period 3½h. to 7h. Rain generally from 12½h. till 23h. Brisk wind from 18h.
			Sum 9.5	Sum 68.7	
No. of Col.		26	27	28	

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.
Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.
The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometer records for the 50 years ending 1916.
In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.
The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.
The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.
The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.59 in. at the beginning of the week to 29.36 in. by 14h. on 26th; increased to 29.51 in. by 9h. on 27th; decreased to 29.39 in. by 18h. on 27th; increased to 29.67 in. by 4h. on 28th; decreased to 29.29 in. by 22h. on 24th; increased to 29.39 in. by 7h. on 30th; decreased to 29.30 in. by 6h. on 31st; increased to 29.57 in. by 11h. on November 1st; decreased to 29.30 in. by 21h. on November 1st; increased and was 29.34 in. by midnight on the same day.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea: no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h., A.M., noon, 3h., P.M., and 9h., P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 60 years ending 1893. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 6). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 66 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong, and v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.59 in. at the beginning of the week to 29.36 in. by 14h. on 26th; increased to 29.51 in. by 9h. on 27th; decreased to 29.39 in. by 18h. on 27th; increased to 29.67 in. by 4h. on 28th; decreased to 29.29 in. by 22h. on 28th; increased to 29.39 in. by 7h. on 30th; decreased to 29.30 in. by 6h. on 31st; increased to 29.57 in. by 11h. on November 1st; decreased to 29.30 in. by 21h. on November 1st; increased and was 29.34 in. by midnight on the same day.

WEEKLY RETURN
OF
BIRTHS AND DEATHS
REGISTERED IN COUNTY BOROUGHES AND OTHER
GREAT TOWNS
AND OF
CASES OF CERTAIN SPECIFIED
INFECTIOUS DISEASES
NOTIFIED IN BOROUGHES, URBAN AND RURAL
DISTRICTS AND PORT SANITARY DISTRICTS
IN
ENGLAND AND WALES
DURING THE WEEK ENDED

SATURDAY, 8TH NOVEMBER, 1924.

Issued by the Registrar General.

LONDON:

PRINTED & PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:

Adastral House, Kingsway, London, W.C.2; 28, Abingdon Street, London, S.W.1;

York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;

or 120, George Street, Edinburgh;

or through any Bookseller.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns : the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 8TH NOVEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the forty-fifth week of the year numbered 7,296 and corresponded to an annual rate of 19·7 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,065 and corresponded to an annual rate of 11·0 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·7, 9·7 and 11·2. Infant mortality was 71 per 1,000 births, against 60, 66 and 82 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,655 births, corresponding to a rate of 18·9 per 1,000, and 954 deaths of civilians, corresponding to a rate of 10·9, as against 9·5, 9·5 and 10·2 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 10·0 per 1,000. The infant mortality was 69 as against 55, 61 and 74 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 87 in the total deaths last week. In London the number of deaths from all causes increased from 897 to 954; the deaths from diphtheria, which had been 14, 5 and 9 in the preceding three weeks, rose to 13 last week, and the deaths from infantile diarrhoea which had been 21, 26 and 28 in the preceding three weeks, fell to 14 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and East are corrected by the exclusion of deaths of persons admitted into public institutions from outside the respective areas.

DATE. NOVEMBER.	ELECTRICITY. (For explanation of symbols, see note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS
SUNDAY .. 2	wP	0.6	9.6	Variably cloudy till 9h., then overcast. Brisk wind throughout. Damping 21 st h. till 23h.
MONDAY .. 3	wP	1.8	9.5	Partially cloudy till 9h., then very cloudy till 15h. clearing to cloudless by 17h. Brisk wind till 3h. Haze 9h. till 15h.
TUESDAY .. 4	wP	6.2	9.4	Cloudless generally. Hoar frost in morning. Haze at night.
WEDNESDAY 5	wP till 16h.; loss of register till 21h., then wP.	0.1	9.4	Cloudless till 14h.; overcast till 20 th h.; clearing to nearly cloudless by 21h.; overcast from 23h. Hoar frost in morn- ing. Mist and fog from 6h. till 21h.
THURSDAY 6	wP till 7 ¹ h.; mP till 15h., then wP.	4.8	9.3	Overcast till 7h.; then nearly cloudless, becoming overcast by 16h
FRIDAY .. 7	wP till 6h.; then mP.	0.3	9.3	Overcast generally.
SATURDAY 8	wP	0.5	9.2	Overcast generally.
No. of Col.	26	Sum 14.3	Sum 65.7	28

The results apply to the Civil Day or from midnight to midnight.
The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 60 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the observation of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.34 in. at the beginning of the week to 30.14 in. by 21h. on 4th; decreased to 30.04 in. by 16h. on 5th; increased to 30.28 in. by 0h. on 7th; decreased and was 29.88 in. by midnight on the 8th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 15TH NOVEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the forty-sixth week of the year numbered 6,782 and corresponded to an annual rate of 18·3 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,213 and corresponded to an annual rate of 11·4 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 9·7, 11·2 and 11·0. Infant mortality was 82 per 1,000 births, against 66, 82 and 71 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,491 births, corresponding to a rate of 17·0 per 1,000, and 980 deaths of civilians, corresponding to a rate of 11·2, as against 9·5, 10·2 and 10·9 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 10·5 per 1,000. The infant mortality was 74 as against 61, 74 and 69 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 145 in the total deaths last week. In London the number of deaths from all causes increased from 954 to 980; the deaths from diphtheria, which had been 5, 9 and 13 in the preceding three weeks, further rose to 17 last week, and the deaths from infantile diarrhoea which had been 26, 28 and 14 in the preceding three weeks, fell to 11 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

			27	28	

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea ; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are: -P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29.88 in. at the beginning of the week to 29.70 in. by 4h. on 10th; increased generally to 30.14 in. by 21h. on 12th; decreased to 29.93 in. by 5h. on 15th; increased and was 30.10 in. at midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 22ND NOVEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the forty-seventh week of the year numbered 6,739 and corresponded to an annual rate of 18·2 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,466 and corresponded to an annual rate of 12·1 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 11·2, 11·0 and 11·4. Infant mortality was 87 per 1,000 births, against 82, 71 and 82 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,625 births, corresponding to a rate of 18·5 per 1,000, and 994 deaths of civilians, corresponding to a rate of 11·4, as against 10·2, 10·9 and 11·2 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 10·9 per 1,000. The infant mortality was 73 as against 74, 69 and 74 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 253 in the total deaths last week. In London the number of deaths from all causes increased from 980 to 994; the deaths from diphtheria, which had been 9, 13 and 17 in the preceding three weeks, fell to 12 last week, and the deaths from infantile diarrhoea which had been 28, 14 and 11 in the preceding three weeks, rose to 20 last week.

* Population adjusted by the exclusion of non-civilians.
† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

Price 1s. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns : the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Poli-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 29TH NOVEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the forty-eighth week of the year numbered 6,481 and corresponded to an annual rate of 17·5 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,366 and corresponded to an annual rate of 11·8 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 11·0, 11·4 and 12·1. Infant mortality was 92 per 1,000 births, against 71, 82 and 86 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,555 births, corresponding to a rate of 17·7 per 1,000, and 1,041 deaths of civilians, corresponding to a rate of 11·9, as against 10·9, 11·2 and 11·4 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 11·4 per 1,000. The infant mortality was 78 as against 69, 74 and 73 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 100 in the total deaths last week. In London the number of deaths from all causes increased from 994 to 1,041; the deaths from diphtheria, which had been 13, 17 and 12 in the preceding three weeks, fell to 8 last week, and the deaths from infantile diarrhoea which had been 14, 11 and 20 in the preceding three weeks, rose to 23 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

DATE.		ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.					
NOVEMBER.										
SUNDAY	23	wP	0·1	8·5	Nearly overcast generally.	<p>The results apply to the Civil Day or from midnight to midnight.</p> <p>The height of the cistern of the barometer is 152 feet above the mean level of the sea ; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1908. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.</p> <p>The values given in column 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are :—P, positive ; N, negative ; W, weak ; m, moderate ; s, strong ; and v, variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.</p> <p>The reading of the barometer decreased from 30·03 in. at the beginning of the week to 28·92 in. by 4h. on 27th ; increased to 29·50 in. by 10h. on 28th ; decreased to 29·39 in. by 2h. on 29th ; increased to 29·55 in. by 11h. on 28th ; decreased and was 29·50 in. by midnight on the same day.</p>				
MONDAY	24	wP	0·0	8·4	Nearly overcast generally. Solar halo 1·1h. till 15h. Damping from 23h.					
TUESDAY	25	wP till 03h. ; wN till 3h. ; wP till 20h. ; then variably wN and wP.	0·1	8·4	Overcast with partially cloudy period 13h. till 17h. Damping till 4h. ; from 20h. till 20h. ; and from 22h. Rain 20h. till 21h.					
WEDNESDAY	26	wP till 1h. ; wN till 2h. ; wP till 18h. ; then variably mN and wP	0·0	8·3	Overcast till 20h. then partially cloudy. Rain till 5h. and from 22h. Damping 14h. till 19h. Brisk Wind from 23h.					
THURSDAY	27	Variably wN and wP throughout.	0·3	8·3	Variably cloudy till 3h., then overcast clearing to early cloudless by 16h. Brisk wind till 9h. Rain generally from 2h. till 16h. Partial solar halo 14h.					
FRIDAY	28	wP till 18h. ; variably sN and wP till 12h. ; wP till 22h. then wN	0·3	8·2	Nearly overcast generally. Rain 8h. till 11h., and from 20h.

Price 1s. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 6TH DECEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the forty-ninth week of the year numbered 6,736 and corresponded to an annual rate of 18·2 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,434 and corresponded to an annual rate of 12·0 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 11·4, 12·1 and 11·8. Infant mortality was 86 per 1,000 births, against 82, 86 and 92 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,569 births, corresponding to a rate of 17·9 per 1,000, and 1,000 deaths of civilians, corresponding to a rate of 11·4, as against 11·2, 11·4 and 11·9 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 11·5 per 1,000. The infant mortality was 76 as against 74, 73 and 78 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 66 in the total deaths last week. In London the number of deaths from all causes decreased from 1,041 to 1,000; the deaths from diphtheria, which had been 17, 12 and 8 in the preceding three weeks, rose to 17 last week, and the deaths from infantile diarrhoea which had been 11, 20 and 23 in the preceding three weeks, fell to 13 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

No. of Col. -		23	27	28	

The results apply to the Civil Day or from midnight to midnight. The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily value point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables. The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 66 years ending 1906, and that of horizontal maximum of the air from a discussion of the anemometric records for the 50 years ending 1906. In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average. The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined. The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable. The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.
The reading of the barometer decreased from 29·50 in. at the beginning of the week to 29·42 in. by 12h. on November 30th; increased to 29·54 in. by 6h. on December 1st; decreased to 29·38 in. by 16h. on 2nd; increased to 29·66 in. by 10h. on 4th; decreased to 29·43 in. by 4h. on 5th; increased and was 30·33 in. by midnight on the 6th.

The results apply to the Civil Day or from midnight to midnight.

The height of the cistern of the barometer is 152 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean readings of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are -P, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer decreased from 29·50 in. at the beginning of the week to 29·42 in. by 12h. on November 30th; increased to 29·54 in. by 10h. on December 1st; decreased to 28·98 in. by 16h. on 2nd; increased to 29·68 in. by 10h. on 4th; decreased to 29·43 in. by 4h. on 5th; increased and was 30·33 in. by midnight on the 6th.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 13TH DECEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the fiftieth week of the year numbered 6,360 and corresponded to an annual rate of 17·2 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,480 and corresponded to an annual rate of 12·1 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 12·1, 11·8 and 12·0. Infant mortality was 94 per 1,000 births, against 86, 92 and 86 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,372 births, corresponding to a rate of 15·7 per 1,000, and 1,073 deaths of civilians, corresponding to a rate of 12·3, as against 11·4, 11·9 and 11·4 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 11·8 per 1,000. The infant mortality was 69 as against 73, 78 and 76 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 47 in the total deaths last week. In London the number of deaths from all causes increased from 1,000 to 1,073; the deaths from diphtheria, which had been 12, 8 and 17 in the preceding three weeks, fell to 14 last week, and the deaths from infantile diarrhoea which had been 20, 23 and 13 in the preceding three weeks, fell to 7 last week.

Population adjusted by the exclusion of non-civilians.

The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of those reported from elsewhere in Scotland during the week; those in Dublin Registration Area and in the other towns are corrected by the exclusion of deaths of persons admitted into public institutions from the respective areas.

Price 1s. net.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows:—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz.:—A, Cholera; B, Plague; C, Puerperal Fever; D, Cerebro-Spinal Fever; E, Acute Poliomyelitis; F, Acute Polio-encephalitis; G, Encephalitis Lethargica; H, Typhus Fever; I, Relapsing Fever; J, Continued Fever; K, Trench Fever; L, Dysentery; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 20TH DECEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the fifty-first week of the year numbered 6,483 and corresponded to an annual rate of 17·5 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,638 and corresponded to an annual rate of 12·6 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 11·8, 12·0, and 12·1. Infant mortality was 97 per 1,000 births, against 92, 86, and 94 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,551 births, corresponding to a rate of 17·7 per 1,000, and 1,079 deaths of civilians, corresponding to a rate of 12·3, as against 11·9, 11·4, and 12·3 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 12·0 per 1,000. The infant mortality was 81 as against 78, 76, and 69 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 158 in the total deaths last week. In London the number of deaths from all causes increased from 1,073 to 1,079; the deaths from diphtheria, which had been 8, 17 and 14 in the preceding three weeks, fell to 9 last week, and the deaths from infantile diarrhoea which had been 23, 13 and 7 in the preceding three weeks, rose to 14 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from the respective areas.

No. of Col. -		28	Sum 8.2	Sum 54.6	28

The results given are from midnight to midnight (G.M.T. Civil Reckoning).
The height of the cistern of the barometer is 162 feet above the mean level of the sea;
no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means
of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb
thermometer are converted into mean daily values by the application of corrections
deduced from a discussion of the photographic records made during the 60 years ending
1903. With the corrected mean reading of the dry bulb thermometer is combined the
corrected mean of the readings of the maximum and minimum thermometers, forming
the mean daily value of the temperature of the air (column 8). The mean daily dew
point temperature and degree of humidity are deduced from the mean daily values
of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observa-
tions made at Greenwich during the 65 years ending 1905, and that of horizontal
movement of the air from a discussion of the anemometric records for the 60 years
ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and
- "lower" than the average.

The values given in column 17 are not corrected for the index error of the thermo-
meter, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer.
The symbols employed are:—P. positive; N. negative; w. weak; m. moderate;
s. strong; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument,
show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased generally from 29.65 in. at the beginning of
the week to 29.80 in. by 2h. on 15th; decreased to 29.35 in. by 0h. on 16th; increased
to 30.15 in. by 2h. on 17th; decreased to 30.05 in. by 16h. on 18th; increased to 30.37 in.
by 10h. on 20th; decreased generally and was 30.35 in. by midnight on the same day.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns, the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poliomyelitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns: the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Poliomyelitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 27TH DECEMBER, 1924.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the fifty-second week of the year numbered 4,240 and corresponded to an annual rate of 11·4 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 4,362 and corresponded to an annual rate of 11·8 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 12·0, 12·1, and 12·6. Infant mortality was 149 per 1,000 births, against 86, 94, and 97 in the preceding three weeks.

In London (Administrative County including the City of London) there were 864 births, corresponding to a rate of 9·9 per 1,000, and 980 deaths of civilians, corresponding to a rate of 11·2, as against 11·4, 12·3, and 12·3 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 11·8 per 1,000. The infant mortality was 113 as against 76, 69, and 81 in the three weeks preceding.

In the aggregate of the great towns there was a decrease of 277 in the total deaths last week. In London the number of deaths from all causes decreased from 1,079 to 980; the deaths from diphtheria, which had been 17, 14, and 9 in the preceding three weeks, rose to 15 last week, and the deaths from whooping cough which had been 12, 12, and 11 in the preceding three weeks, rose to 22 last week.

Table 1.—105 COUNTY BOROUGHES and
 GREAT TOWNS, GREATER LONDON,
 and FOUR SCOTTISH and IRISH TOWNS. } BIRTHS and DEATHS registered in the
 week ended 27th December, 1924.

Population adjusted by the exclusion of non-civilians.
 The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from outside the respective areas.

DECEMBER.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																		

DATE. DECEMBER.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.	
SUNDAY ..	21	0.0	7.8	Overcast. Damping 6h. till 11½h.	<p>The results given are from midnight to midnight (G.M.T. Civil Reckoning). The height of the cistern of the barometer is 162 feet above the mean level of the sea; no correction has been applied to the readings to reduce to sea level.</p> <p>Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.</p> <p>The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 65 years ending 1905, and that of horizontal movement of the air from a discussion of the anemometric records for the 50 years ending 1916.</p> <p>In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower" than the average.</p> <p>The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.</p> <p>The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are:—F, positive; N, negative; w, weak; m, moderate; s, strong; and v, variable.</p> <p>The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.</p> <p>The reading of the barometer decreased from 30.35 in. at the beginning of the week to 29.61 in. by 4h. on 24th; increased to 29.76 in. by 10h. on 25th; decreased generally to 29.01 in. by 15h. on 27th; increased and was 29.07 in. by midnight on the same day.</p>
MONDAY ..	22	1.5	7.8	Overcast till 11½h.; clearing to nearly cloudless by 13½h. Slight haze from 20h. Hoar frost at night.	
TUESDAY ..	23	0.6	7.8	Nearly overcast. Brisk wind from 3h. till 14h. Rain generally from 11h. till 21½h.	
WEDNESDAY	24	1.2	7.8	Variably cloudy becoming nearly overcast by 10½h. Squall with rain 4½h. Rain 11½h. till 12h., and from 23h.

EXPLANATORY STATEMENT.

TABLE 1 shows, for the several towns; the births and deaths (distinguishing deaths from certain causes and those of infants under one year of age) for the week ended last Saturday.

TABLE 2 shows the births and deaths (distinguishing certain causes) and death rates in London and in certain cities in the British Empire and in foreign countries.

TABLE 3 shows the deaths in London at ages and by causes of death.

TABLE 4 is a summary of returns of notified cases of certain Infectious Diseases (*vide infra*).

TABLE 5 shows for (a) London and (b) the Great Towns in the aggregate the births, deaths (distinguishing those of infants under one year of age) and numbers of notified cases of and deaths from certain diseases in each of the preceding thirteen weeks.

TABLE 6 is a Report of the meteorological conditions in certain towns for the week as a whole.

TABLE 7 is a Report of the meteorological observations taken at Greenwich on each day of the week.

WEEKLY SUMMARY OF INFECTIOUS DISEASES (TABLE 4).

1. Table 4 is a weekly Summary of notified cases of certain specified infectious diseases in England and Wales and is based upon weekly returns received from the Medical Officers of Health of all Local Sanitary Authorities, including Port Sanitary Authorities. The figures are now included in the present publication by arrangement with the Ministry of Health in pursuance of Section 5 of the Census Act, 1920.

2. The arrangement of this Table is as follows :—

Particulars for London are contained in Part I. Part II. contains particulars for sanitary districts, outside London, arranged under county headings ; the counties being entered in alphabetical order. Particulars for Port Sanitary Districts are given in Part III.

Under each county, the names of (a) the Boroughs and Urban Districts and (b) the Rural Districts, are entered in alphabetical order.

The names of Boroughs and Urban Districts with populations of over 10,000, according to the last Census, are marked with a †.

County Boroughs are marked "C.B."

3. The names of districts in respect of which "Nil" returns have been received indicating that no cases of the specified infectious diseases have been notified during the week, are omitted from this Summary.

4. The infectious diseases comprised in this Summary include the more important infectious diseases which are notifiable under the general law, and also cerebro-spinal fever, acute poliomyelitis, plague, acute poli-encephalitis, encephalitis lethargica, pneumonia, dysentery, trench fever and ophthalmia neonatorum, which are notifiable either under the general law or under Orders which were made by the Local Government Board.

The first five columns of the Summary relate to diseases specified in the headings to the columns; the heading "Diphtheria" includes Membranous Croup, the heading "Enteric Fever" includes Typhoid and Paratyphoid. The sixth column is intended to contain a figure (or figures) relating to one or more of the undermentioned diseases. In order to show to what disease any such figure relates, one of the following symbols is employed, viz. :—A, Cholera ; B, Plague ; C, Puerperal Fever ; D, Cerebro-Spinal Fever ; E, Acute Poliomyelitis ; F, Acute Polio-encephalitis ; G, Encephalitis Lethargica ; H, Typhus Fever ; I, Relapsing Fever ; J, Continued Fever ; K, Trench Fever ; L, Dysentery ; M, Ophthalmia Neonatorum. Cases of Plague (if any) are mentioned specially in footnotes.

5. Quarterly and annual summaries of the information, adjusted in respect of any returns or corrections received too late for the weekly issues, will be published in due course.

NOTES FOR THE WEEK ENDED 3RD JANUARY, 1925.

BIRTHS AND DEATHS.

In the 105 County Boroughs and Great Towns of England and Wales the births registered in the fifty-third week of the year numbered 7,645 and corresponded to an annual rate of 20·6 per 1,000 living.

The civilian deaths corrected as far as possible for non-residents numbered 5,223 and corresponded to an annual rate of 14·1 per 1,000 of their aggregate civilian population, which is estimated at 19,263,854 in the year 1923. In the preceding three weeks the rates had been 12·1, 12·6, and 11·8. Infant mortality was 94 per 1,000 births, against 94, 97, and 149 in the preceding three weeks.

In London (Administrative County including the City of London) there were 1,905 births, corresponding to a rate of 21·7 per 1,000, and 1,267 deaths of civilians, corresponding to a rate of 14·5, as against 12·3, 12·3, and 11·2 for the preceding three weeks. For the four weeks ended Saturday last the death rate averaged 12·6 per 1,000. The infant mortality was 76 as against 69, 81, and 113 in the three weeks preceding.

In the aggregate of the great towns there was an increase of 861 in the total deaths last week. In London the number of deaths from all causes increased from 980 to 1,267; the deaths from diphtheria, which had been 14, 9, and 15 in the preceding three weeks, fell to 8 last week, and the deaths from whooping cough which had been 12, 11, and 22 in the preceding three weeks, rose to 30 last week.

* Population adjusted by the exclusion of non-civilians.

† The populations relate to 1924. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland during the week; those in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas.

The hours of observation are given in the Monthly Weather Report of the Meteorological Office.
Kindly furnished by Sir John W. Moore, M.A., M.D., D.Sc., F.R.Met. Soc., Dublin.

1 millimetre = .04 inch nearly; 1 inch = 25.4 millimetre exactly.

DATE.	ELECTRICITY. (For explanation of symbols, see Note.)	Registered Sunshine in hours.	Sun above Horizon in hours.	GENERAL REMARKS.
SUNDAY .. 28	wP	4.3	7.8	Partially cloudy till 15h., then very cloudy, clearing to nearly cloudless by 21h. Shower 4h.
MONDAY .. 29	wP	5.3	7.8	Nearly cloudless till 20h., then cloud- ing up to overcast by 21h. Hoar frost in morning. Haze 9h. till 13h. Thick haze 17h. till 21h. Brisk wind from 21h.
TUESDAY .. 30	wP till 8h., then loss of register.	0.0	7.8	Overcast till 19h., then clearing rapidly to cloudless. Slight rain 5h. till 14h. Heavy rain 15h. till 15h., then rain till 18h. High wind till 14h.
WEDNESDAY 31	Loss of register till 11h.; wP till 16h.; then mP.	1.8	7.8	Cloudless till 6h., then variably cloudy. Brisk wind 7h. till 9h., and from 12h. till 18h. Rain 9h. till 10h. Heavy squall with hail 13h.
JANUARY. THURSDAY 1	wP till 24h.; wN till 8h.; wP till 23h.; then variably wN and wP.	0.0	7.9	Overcast generally. Slight rain 2h. till 4h., and 12h. till 13h. Rain generally from 20h. Brisk wind from 11h. till 13h. then high wind.
FRIDAY .. 2	Variably wN and wP till 6h.; then wP.	0.0	7.9	Overcast. High wind till 3h., and from 7h. till 17h., then brisk wind. Frequent lunar halo in evening.
SATURDAY 3	wP	0.0	7.9	Overcast. Brisk wind till 13h. Rain generally 17h. till 22h., and at 0h.
No. of Col. - ..	26	Sum 11.4	Sum 54.9	28

The results given are from midnight to midnight (G.M.T. Civil Reckoning).

The height of the cistern of the barometer is 152 feet above the mean level of the sea ; no correction has been applied to the readings to reduce to sea level.

Observations are usually taken at 9h. A.M., noon, 3h. P.M., and 9h. P.M. The means of the eye-readings of the barometer the dry bulb thermometer, and the wet bulb thermometer are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records made during the 50 years ending 1903. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygrometrical Tables.

The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 66 years ending 1906, and that of horizontal movement of the air from a discussion of the anemometric records for the 60 years ending 1916.

In reading columns 9 and 24 it will be borne in mind that + indicates "higher," and - "lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, which cannot be determined.

The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are :—P. positive ; N. negative ; w. weak ; m. moderate ; s. strong ; and v. variable.

The numbers in column 27, derived from the Campbell Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

The reading of the barometer increased from 29.07 in. at the beginning of the week to 29.87 in. by 17h. on 28th ; decreased to 29.25 in. by 14h. on 30th ; increased to 29.56 in. by 2h. on 31st ; decreased to 29.41 in. by 12h. on 1st. ; increased to 29.64 in. by 7h. on Jan. 1st ; decreased to 29.99 in. by 14h. on Jan. 2nd ; increased to 29.41 in. by 18h. on Jan. 3rd. ; decreased and was 29.28 in. by midnight on the same day.
